Chapter 5 Variable Costing

QUESTIONS

1. In full costing, fixed manufacturing overhead is treated as a product cost. In variable costing, fixed manufacturing overhead is treated as a period cost.
2. When production exceeds sales, part of fixed manufacturing overhead will remain in ending inventory. In variable costing, the entire amount of fixed manufacturing overhead will be expensed since it is treated as a period cost.) Thus, income computed under full costing will exceed income computed under variable costing (since some fixed production costs are not expensed) when production exceeds sales.
3. Variable costing facilitates C-V-P analysis since fixed and variable costs are separated and a contribution margin is calculated. Also, under variable costing, managers cannot artificially inflate profit by producing more units than they sell and bury fixed manufacturing overhead in inventory.
4. Companies using JIT generally have low levels of work in process and finished goods inventory. Thus, even when a company uses full costing, very little of fixed manufacturing overhead is in inventory at the end of a period. Rather, most of it is expensed just as in variable costing.
5. Under full costing, ending inventory includes direct material, direct labor, variable manufacturing overhead, and fixed manufacturing overhead. Under variable costing, ending inventory includes each of these items except fixed manufacturing overhead. Thus, the inventory balance under variable costing is always less than the balance under full costing (assuming the balance is not zero).
