Systems Biology of Transcription Regulation Ekaterina Shelest, Edgar Wingender, Joerg Linde, 2016-09-09 Transcription regulation is a complex process that can be considered and investigated from different perspectives Traditionally and due to technical reasons including the evolution of our understanding of the underlying processes the main focus of the research was made on the regulation of expression through transcription factors TFs the proteins directly binding to DNA On the other hand intensive research is going on in the field of chromatin structure remodeling and its involvement in the regulation Whatever direction we select we can speak about several levels of regulation For instance concentrating on TFs we should consider multiple regulatory layers starting with signaling pathways and ending up with the TF binding sites in the promoters and other regulatory regions However it is obvious that the TF regulation also including the upstream processes represents a modest portion of all processes leading to gene expression For more comprehensive description of the gene regulation we need a systematic and holistic view which brings us to the importance of systems biology approaches Advances in methodology especially in high throughput methods

result in an ever growing mass of data which in many cases is still waiting for appropriate consideration Moreover the accumulation of data is going faster than the development of algorithms for their systematic evaluation Data and methods integration is indispensable for the acquiring a systematic as well as a systemic view In addition to the huge amount of molecular or genetic components of a biological system the even larger number of their interactions constitutes the enormous complexity of processes occurring in a living cell organ organism In systems biology these interactions are represented by networks Transcriptional or more generally gene regulatory networks are being generated from experimental ChIPseq data by reverse engineering from transcriptomics data or from computational predictions of transcription factor TF target gene relations While transcriptional networks are now available for many biological systems mathematical models to simulate their dynamic behavior have been successfully developed for metabolic and to some extent for signaling networks but relatively rarely for gene regulatory networks Systems biology approaches provide new perspectives that raise new questions Some of them address methodological problems others arise from the newly obtained understanding of the data These open questions and problems are also a subject of this Research Topic

Natural Resources and Life Sciences 2022 (NRLS-BIO 2022) Johan Sukweenadhi,Finna Setiawan,2023-12-26 This is an open access book Molecular biology has given a great impact in life science investigation The advances in molecular biology over the last several decades have boosted research and product development in many disciplines of life science including Biotechnology and Pharmacy This advances comprise 1 the progression of more sophisticated techniques in molecular biology with a broad interdisciplinary applications 2 the expanding flow of information of technical novelties and scientific

discoveries across scientific community and 3 the development of more sophisticated software and continuously updated databases This has changed the rationale and approach of experimentations giving rise to revolutionizing discoveries in many fields of science It has become evident that the deregulation of molecular processes in body is associated with and in certain circumstances is the direct cause of a wide range of pathological conditions It is necessary to mention the biomedical relevance of molecular biology related investigations for drug discovery and the development of a more personalized medicine Given the rapidly changing and continuously evolving nature of the molecular biology field we can anticipate that the revolutionary impact of molecular biology in life sciences is only at the beginning and is far from being finished To highlight the rapidly growing research and product development in the field of Biotechnology and Pharmacy the 4th International Conference on Natural Resources and Life Sciences NRLS themed Biotechnology and pharmacy driven research and product development is presented Following the successful program of 1st 2nd and 3rd NRLS we intend to hold the next two day conference along with a one day optional workshop in 4th NRLS as a scientific forum for biotechnology and pharmacy researchers and product developers to discuss the recent advances in the fields and their application It is a great pleasure to invite you to the forthcoming 4th NRLS Conference which will be held virtually on August 24th 25th 2022 and the following onsite workshop on August 26th 2022 China's Medium and Long-Term Science and Technology Program

Zhenghong Chen, 2021-08-28 This book conducts a panoramic study on the history of China's Science and Technology which focuses on the Medium and Long Term Science and Technology Program MLSTP In general these Programs have a duration of 5-30 years This book provides an epochal assessment of the project's conceptual context over the past 60 years The author shows that the historical evolution and conceptual development of China's MLSTP are the result of an amalgamation of political, economic and social factors within distinct contemporary contexts As a national action plan MLSTP has incorporated many of the factors that go beyond the intentional factors of science and technology MLSTP is not only a macro vision and blueprint for scientific and technological development it is also a political act of realizing the national will While ensuring the MLSTP builds on its great achievements the author also reflects upon its deficiencies and disadvantages in order to better promote the advancement of science and technology in China This book comprehensively lays out the historical and theoretical dimensions Based on a clear vision of historical constructivism the author has compiled the MLSTP philosophy of different eras into a conceptual framework for this era and used this framework to research and analyze the historical and conceptual evolution of MLSTP Research on MLSTP is important for as enrichment of contemporary studies in the history of science and the science and technology policy In 2010 more than 60 years after the establishment of the People's Republic of China the country had enacted 10 MLSTP programs This book separates the development of the MLSTP into three different historical eras the era of economic planning the era of economic transformation and the new century Each historical epoch corresponds to a different MLSTP philosophy concept which enables us to study the conceptual evolution of MLSTP using

historical research as our foundation Technologies in Biomedical and Life Sciences Education Harry J. Witchel, Michael W. Lee, 2022-06-24 This contributed volume focuses on understanding the educational strengths and weaknesses of mediated content including media as a learning supplement in comparison to traditional face to face learning Each chapter includes research on and a broad brush summary of approaches to combining life sciences education with educational technologies The chapters are organized into four main sections each of which focuses on a key question regarding the consequences of incorporating media into education In this regard the authors highlight how educational technology is both a bridge and barrier to student access and inclusivity Further they address the ongoing discussion as to whether students need to be present for lectures and on how having agency in their own learning can improve both retention and conceptual understanding To link the content to current events the authors also shed light on the impact that the COVID 19 pandemic is having on the continuity of educational programs and on the growing importance of educational technologies Consequently the book offers life science educators valuable guidance on the technologies already available and an outlook on what is yet to come *Breakthroughs in Space Life Science Research* Günter Ruyters, Markus Braun, Katrin Maria Stang, 2021-06-10 This last volume of the SpringerBriefs in Space Life Sciences series is setup in 5 main parts The 1st part shortly summarizes the history of life science research in space from the late 40s until today with focus on Europe and Germany followed by a part on describing flight opportunities including the Space Shuttle Spacelab system and the International Space Station ISS in the 3rd part it focuses on extraordinary success stories of this constantly challenging research program and highlights some important key findings in space life science research The book introduces in the 4th part innovative developments in non invasive biomedical diagnostics and training methods for astronauts that emerge from this program and are of benefit for people on Earth especially in the aging society Last but not least in its 5th part it closes with an outlook on the future of space life sciences in the upcoming era of space exploration The book is intended for students and research scientists in the life sciences and biomedicine as well as for interested lay persons who wish to get an overview of space life science research its early days current status and future directions *Excel 2019 for Biological and Life Sciences Statistics* Thomas J. Synthetic Biology 2020: Frontiers in Risk Analysis and Governance Benjamin D. Trump,Christopher L. Cummings,Jennifer Kuzma,Igor Linkov,2019-11-28 Synthetic biology offers powerful remedies for some of the world s most intractable problems but these solutions are clouded by uncertainty and risk that few strategies are available to address The

incentives for continued development of this emerging technology are prodigious and obvious and the public deserves assurances that all potential downsides are duly considered and minimized accordingly Incorporating social science analysis within the innovation process may impose constraints but its simultaneous support in making the end products more acceptable to society at large should be considered a worthy trade off Contributing authors in this volume represent diverse perspectives related to synthetic biology s social sciences and reflect on different areas of risk analysis and governance that have developed for the field Such perspectives include leading scholarly discussion pertaining to risk assessment governance ethics and communication The chapters of this volume note that while the first twenty years of synthetic biology development have focused strongly on technological innovation and product development the next twenty should emphasize the synergy between developers policymakers and publics to generate the most beneficial well governed and transparent technologies and products possible Many chapters in this volume provide new data and approaches that demonstrate the feasibility for multi stakeholder efforts involving policymakers regulators industrial developers workers experts and societal representatives to share responsibilities in the production of effective and acceptable governance in the face of uncertain risk probabilities A full consideration of such perspectives may prevent a world of draconian regulations based on an insufficient or incomplete understanding of the science that underpins synthetic biology as well as any hesitancy or fear by the public to adopt its eventual products
