This is a humble presentation of the Electrolyzed Reduced Water ERW Water Infused with Molecular Hydrogen and its various health ramifications Molecular hydrogen gas is probably the greatest discovery in medical science and healthcare since 1953 Hydrogen is the lightest and smallest molecule of gas in our Universe When infused into purified water it produces a liquid that can hydrate virtually all our 37 2 trillion cells at epigenetic levels at speeds that are shockingly fast when seen under the microscope People often feel better and ailments disappeared But only recently did research confirm that this water contains dissolved hydrogen gas Since 2007 the biochemistry in medical science communities has exploded with over 1 000 academic papers and clinical studies to embrace this marvelous molecule for super health One glass of water does not equal another One may just pacify your thirst while the other you may enjoy drinking and in Japan people know about this difference And the whole world is now gradually getting aware of this phenomenon of availability of this water right in your home While there are a few articles in this book for you to review I would encourage you to do more research for yourself A simple PubMed and or NIH search for ERW is usually enough for most of us Every known condition has at its core something to do with hydration ERW is a critical piece of the health puzzle and with it chances of the body getting back to balance are much greater This statement is validated by research details of which are available throughout the book

**A Healthcare Solution** Mark A. Vonderembse, David D. Dobrzykowski, 2016-10-14 The evidence is undeniable By any measure the US spends more on healthcare than any other country in the world yet its health outcomes as measure by longevity are in the bottom half among developed countries and its health related quality of life has remained constant or declined since 1998 In addition to high costs and lower than expected outcomes the healthcare delivery system is plagued by treatment delays as it can take weeks to see a specialist and many people have limited or no access to care Part of the challenge is that the healthcare delivery system is a large complex and sophisticated value creation chain Successfully changing this highly interconnected system is difficult and time consuming because the underlying problems are hard to comprehend the root causes are many the solution is unclear and the relationships among problems causes and solution are multifaceted To address these issues the book carefully explains the underlying problems examines their root causes using information data and logic and presents a comprehensive and integrated solution that addresses these causes These three steps are the methodological backbone of this book A solution depends on understanding and applying the principles of patient centered care PCC and resource management PCC puts patients supported by their primary care physicians back in the role as decision makers and depends on patients being responsible for their health including making good life style choices After all the best way to reduce

healthcare costs and increase quality of life is to improve our health and wellness and as a result need less care In addition health insurance must be rethought and redesigned so it is less likely to lead to overuse For many people with health insurance the out of pocket cost of healthcare are small so healthcare decision making is often biased toward consumption Effective resource management means that healthcare providers must do a better job of acquiring and using resources in order to provide care quickly productively and correctly This means improving healthcare strategy and management accelerating the use of information technology making drug costs affordable and fair reducing the incidence of malpractice and rebuilding the provider network In addition implementation is difficult because there are many participants in the healthcare delivery value chain such as physicians nurses and medical technicians as well as many provider organizations such as hospitals clinics physician offices and labs Further up the value chain there are pharmaceutical companies equipment providers and other suppliers These participants have diverse and sometimes conflicting goals but each must be willing to accept change and work in a coordinated manner to improve healthcare To overcome these problems strong national leadership is needed to get the attention and support from the people and organizations involved in healthcare and to make the comprehensive changes that will lower healthcare costs improve healthcare quality eliminate delays increase access and enhance patient satisfaction

### **Improving Health Care Cost Projections for the Medicare Population**

National Research Council, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, 2010-11-30 Developing credible short term and long term projections of Medicare health care costs is critical for public and private sector policy planning but faces challenges and uncertainties There is uncertainty not only in the underlying economic and demographic assumptions used in projection models but also in what a policy modeler assumes about future changes in the health status of the population and the factors affecting health status the extent and pace of scientific and technological breakthroughs in medical care the preferences of the population for particular kinds of care the likelihood that policy makers will alter current law and regulations and how each of these factors relates to health care costs for the elderly population Given the substantial growth in the Medicare population and the continued increases in Medicare Medicaid and private health insurance spending the availability of well specified models and analyses that can provide useful information on the likely cost implications of health care policy alternatives is essential It is therefore timely to review the capabilities and limitations of extant health care cost models and to identify areas for research that offer the most promise to improve modeling not only of current U S health care programs but also of policy alternatives that may be considered in the coming years The National Research Council conducted a public workshop focusing on areas of research needed to improve health care cost projections for the Medicare population and on the strengths and weaknesses of competing frameworks for projecting health care expenditures for the elderly The workshop considered major classes of projection and simulation models that are currently used and the underlying data sources and research inputs for these models It also explored areas

in which additional research and data are needed to inform model development and health care policy analysis more broadly. The workshop summarized in this volume drew people from a wide variety of disciplines and perspectives including federal agencies, academia, and nongovernmental organizations. *The Tax-exempt Hospital Sector* United States.
