Hazards Darius Bartlett, Ramesh Singh, 2018-04-09 The Sendai Framework for Disaster Risk Reduction 2015-2030 has identified four priority areas for Disaster Risk Reduction: understanding disaster risk, strengthening disaster risk governance to manage disaster risk, investing in disaster risk reduction for resilience, and enhancing disaster preparedness for effective response and to Build Back Better in recovery, rehabilitation and reconstruction. Although tremendous progress has been made in recent decades in understanding the workings of the Earth systems and in particular its impacts on and responses to human actions, there remains a continuing and pressing need for knowledge that will allow society to simultaneously reduce exposure to global environmental hazards while also meeting economic development goals. *Exploring Natural Hazards: A Case Study Approach* contributes to the knowledge showcasing advanced practices for the monitoring of natural hazards. Through each case study, the book examines mainly hazards arising from processes within the hydrosphere and atmosphere triggered or exacerbated by inputs to and transfers of energy between environmental components. It discusses the causes of these phenomena and ways in which improved policy making, sometimes coupled with the application of appropriate modern technologies, can help to reduce people's exposure to harm. Discussing challenges, lessons learned, and recommendations, this book provides a snapshot of issues related to tropical cyclones and typhoons, desertification, floods, lightning as a hazard, and the need for alert systems. It is a valuable resource for practitioners and professionals alike, for researchers, students, and others who work at the intersection between environmental hazards, sustainable development, and social justice.

Insulation Co-ordination in High-voltage Electric Power Systems W. Diesendorf, 2015-04-30 *Insulation Co-ordination in High Voltage Electric Power Systems* deals with the methods of insulation needed in different circumstances. The book covers topics such as overvoltages and lightning surges, disruptive discharge, and withstand voltages, self-restoring and non-self-restoring insulation, lightning overvoltages on transmission lines, and the attenuation and distortion of lightning surges. Also covered in the book are topics such as the switching surge designs of transmission lines as well as the insulation coordination of high voltage stations. The text is recommended for electrical engineering students and practitioners who would like to know more about the methods of insulation and their applications. *Technical Publications for Army Air*
