The Logic of Relativism Mark Ressler, 2013-08-03 This in depth study aims to develop a rigorous analysis of the nature and the logic of relativism in general as a basis for evaluating the charge of self refutation against relativism It develops a general definition of relativism that distinguishes relativism from structurally similar notions such as conventionalism and contextualism On the basis of this definition it formulates a series of logical systems that each might be presented as candidates for the logic of relativism Each system is evaluated to see whether it can sustain the charge of self refutation The result is that one of these systems can be proven not to be self refuting even under increasingly stronger challenges Consequently this study argues that even global relativism can be demonstrated not to refute itself despite the long history of arguments to the contrary
