Marine Genetic Resources, R&D and the Law 1 Bleuenn Guilloux, 2018-09-05 Advances in research and development reveal the immense diversity and potential of marine genetic resources Under international law no specific regime applies to these complex and paradoxical objects of use The Law of the Sea Convention sets a framework that is partly inadequate for this new category of resources The Biodiversity Convention and the Nagoya Protocol only address the genetic resources of national areas Patents allow their holder to exercise a monopoly on exploiting biotechnological creations to extensive claims questioning the common nature of biodiversity and related knowledge They hinder research and the objectives of biodiversity law The legal and practical rules of physical and functional access vary in geometry They focus on the valorization of research results crystallizing conflicts of interest between suppliers and users Sustainable research and development is essential to the knowledge and protection of marine biodiversity The qualification of marine genetic resources in common standard contractual tools distributed research and development infrastructures negotiation of an agreement on sustainable use and conservation of biodiversity beyond the limits of national jurisdiction would To remove these inconsistencies

Value and Economy of Marine Resources André Monaco, Patrick Prouzet, 2014-12-01 Marine resources and their exploitation recovery and economic networks they generate are here from the perspective now inevitable growing environmental constraints policy management and technical innovation The recent development of marine biotechnology the discovery of a great pharmacopoeia especially in reef environments the development of marine renewables are examples which show that man can develop through these new technologies property and services of the ocean But this development resources under pressure of global change requires not only taking into account technical but also social and political This is the price that the analysis of maritime activities will assess the sustainability and development of various economic sectors and coastal populations faced with the objectives of a blue growth associated with a return to the good state of the marine environment

Invasive Species and Human Health Giuseppe Mazza, Elena Tricarico, 2018-07-13 Invasive alien plants and animals are known for their disruption of ecosystems and threat to biodiversity. This book highlights their major impact on human health. This includes not only direct effects through contact with the species via bites, wounds and disease but also indirect effects caused by changes induced in ecosystems by invasive species such as more water hyacinth increasing mosquito levels and thereby the potential for malaria. Covering a wide range of case studies from different taxa, animals and plants and giving an overview of the diverse impacts of invasive species on health in developed and developing countries, the book is a significant contribution that will help in prioritizing approaches to controlling invasive species and mitigating their health effects. It covers invasive plants, marine species, spiders and other arachnids, ticks and dust mites, insects, mosquitos and other diptera, freshwater species, invertebrates and fishes, amphibians and reptiles, birds and mammals. The broad spectrum of the analyzed case studies will ensure the appeal of the book to a wide public including researchers of biological invasions, doctors, policy makers and managers and students of invasive species in ecology, animal and plant biology and public health medicine.

Bryozoan Studies 2010 Andrej Ernst, Priska Schäfer, Joachim Scholz, 2012-06-05 Bryozoa are a colonial animal phylum with a long evolutionary history having existed from the early Ordovician 480 My onward and still flourishing today. Several mass extinctions in earth history shaped and triggered bryozoan evolution through drastic turnover of faunas and new evolutionary lineages. Bryozoa are widespread across all latitudes from Equator to Polar Regions and occur in marine and freshwater environments. They are shaping benthic ecosystems and recording ambient environmental conditions in their skeletons. The book provides a synthesis of the current main topics of research in the field of Bryozoology including combined research on both extant and extinct taxa. Fields or current research span molecular genetics and phylogeny, life history, reproduction and anatomy, biodiversity and evolutionary patterns in time and space, taxonomy, zoogeography, ecology, sediment interactions and climate response.

Ocean-Atmosphere Interactions of Gases and Particles Peter S. Liss, Martin T. Johnson, 2013-12-18 The oceans and atmosphere interact through various processes including the transfer of momentum, heat, gases and particles. In this book leading international experts come together to provide a state of the art account of these exchanges and their role in the Earth system with particular focus on gases and particles. Chapters in the book cover: i) the ocean-atmosphere exchange of short-lived trace gases; ii) mechanisms and models of interfacial exchange including transfer velocity parameterisations; iii) ocean-atmosphere exchange of the greenhouse gases carbon dioxide, methane and nitrous oxide; iv) ocean-atmosphere exchange of particles; and v) current and future data collection and synthesis efforts. The scope of the book extends to the biogeochemical responses to emitted/deposited material and interactions and feedbacks in the wider Earth system context. This work constitutes a highly detailed synthesis and reference of interest to higher level university students, Masters, PhD and researchers in ocean-atmosphere interactions and related fields: Earth system science, marine atmospheric biogeochemistry, climate. Production of this book was supported and funded by the EU.

Descriptive Taxonomy Mark F. Watson, Chris H. C. Lyal, Colin A. Pendry, 2015-01-08 In an age when biodiversity is being lost at an unprecedented rate it is vital that floristic and faunistic information is up to date reliable and easily accessible for the formulation of effective conservation strategies Electronic data management and communication are transforming descriptive taxonomy radically enhancing both the collection and dissemination of crucial data on biodiversity This volume is written by scientists at the forefront of current developments of floras and faunas along with specialists from applied user groups The chapters review novel methods of research development and dissemination which aim to maximise the relevance and impact of data Regional case studies are used to illustrate the outputs and impacts of taxonomic research Integrated approaches are presented which have the capacity to accelerate the production of floras and faunas and to better serve the needs of a widening audience

Mudflat Ecology Peter G. Beninger, 2019-02-13 Intertidal mudflats are distinct highly productive marine habitats which provide important ecosystem services to the land sea interface In contrast to other marine habitats and despite a large body of primary scientific literature no comprehensive synthesis exists such that the scattered knowledge base lacks an integrated conceptual framework We attempt to provide this synthesis by pulling together and contextualizing the different disciplines tools and approaches used in the study of intertidal mudflats The editor pays particular attention to relationships between the various components of the synthesis both at the conceptual and the operational levels validating these relationships through close interaction with the various authors

Biodiversity and Environmental Change Emma Burns, Andrew Lowe, Nicole Thurgate, David Lindenmayer, 2014-02-06 This data rich book demonstrates the value of existing national long term ecological research in Australia for monitoring environmental change and biodiversity Long term ecological data are critical for informing trends in biodiversity and environmental change The Terrestrial Ecosystem Research Network TERN is a major initiative of the Australian Government and one of its key areas of investment is to provide funding for a network of long term ecological research plots around Australia LTERN LTERN researchers and other authors in this book have maintained monitoring sites often for one or more decades in an array of different ecosystems across the Australian continent ranging from tropical rainforests wet eucalypt forests and alpine regions through to rangelands and deserts This book highlights some of the temporal changes in the environment that have occurred in the various systems in which dedicated field based ecologists have worked Many important trends and changes are documented and they often provide new insights that were previously poorly understood or unknown These data are precisely the kinds of data so desperately needed to better quantify the temporal trajectories in the environment in Australia By presenting trend patterns and often also the associated data the authors aim to catalyse governments and other organisations to better recognise the importance of long term data collection and monitoring as a fundamental part of ecologically effective and cost effective management of the environment and biodiversity
