Marine Science Chapter 13:

Investigating the oceans Great Britain: Parliament: House of Commons: Science and Technology Committee, Great Britain. Parliament. House of Commons. Select Committee on Science and Technology, 2007-10-18 Ocean processes are fundamental to climate and weather patterns across the world they provide minerals foods and chemicals as well as being major energy resources both hydrocarbons and renewables Oceans also provide services in the form of transport trade communications and recreation as well as services through the maintenance of biological and landscape diversity the importance of which may only be fully appreciated by future generations For all these reasons the Committee's report finds that despite the impressive research efforts of UK institutions and individual scientists oceans need to be monitored and studied more thoroughly than has been the case up to now with better co ordination of activities and increased overall levels of funding The Committee's central recommendation is that there should be a new marine science agency replacing the current inter agency co ordinating committee with a remit to co ordinate marine science throughout the UK promoting marine science education in schools universities and to the wider public Overall responsibility for the UK's marine science strategy should be invested in a designated minister within Defra The new agency should undertake a strategy to tackle skills shortages in marine science and technology engaging with industry and facilitating UK involvement in international organisations as well as co ordinating ocean monitoring and observations Another key task will be to ensure the balance of research effort between the different strands within marine science and between the crucial polar regions with a greater focus in the Arctic albeit not at the expense of the work conducted by the British Antarctic Survey Concerns are raised over the research vessel capacity available to UK scientists provided by NERC especially for coastal research and with regards to the adequacy of Defra's plans to establish marine protected areas under the forthcoming marine bill Understanding the Oceans Dr Margaret Deacon, Margaret Deacon, Tony Rice, Colin Summerhayes, 2013-10-16 Authoritative historical perspectives tracing the contribution of the HMS Challenger expeditions through to modern marine science Encompasses oceanography marine biology marine geology and ocean science Crude Oil Transportation System, Valdez, Alaska to Midland, Texas (as Proposed by SOHIO Transportation Company) United States. Oceanographic Processes of Coral Reefs Eric Wolanski,Michael J. Kingsford,2024-02-29 In the last two decades since publication of the first edition substantial advancements have been made in the science the need for transdisciplinary approaches to coral reef protection greater than ever before This new edition now in full color throughout with accompanying animations goes beyond identifying foundational information and current problems to pinpoint science based solutions for managers stakeholders and policy makers Coral reefs are connected by currents that carry plankton and the larvae of many reef based organisms Further they supply food to reefs Currents also bring pollutants from the land and together with the atmosphere affect the surrounding ocean The chapters in this book provide a much needed review of the biophysics of reefs with an emphasis on the Great Barrier Reef as an ecosystem The focus is on interactions between currents waves sediment and the dynamics of coastal and reef based ecosystems The topographic complexity of reefs redirects mainstream currents creates tidal eddies mushroom jets boundary layers stagnation zones and this turbulence is enhanced by the oceanographic chaos in the adjoining Coral Sea This is the environment in which particles and organisms of a range of sizes live from tiny plankton to megafauna This generates faunal connectivity at scales of meters to thousands of km within the Great Barrier Reef and with the adjoining ocean Pollution from land use is increasing and remedial measures are described both on land and on coral cays The impact of climate change is quantified in case studies

about mangroves and corals Modelling this biophysical complexity is increasing in sophistication and the authors suggest how the field can advance further
