Accelerating MATLAB Performance Yair M. Altman, 2014-12-11 The MATLAB programming environment is often perceived as a platform suitable for prototyping and modeling but not for serious applications. One of the main complaints is that MATLAB is just too slow. Accelerating MATLAB Performance aims to correct this perception by describing multiple ways to greatly improve MATLAB program speed. Packed with thousands of helpful tips, it leaves no stone unturned, discussing every aspect of MATLAB. Ideal for novices and professionals alike, the book describes MATLAB performance in a scale and depth never before published. It takes a comprehensive approach to MATLAB performance, illustrating numerous ways to attain the desired speedup. The book covers MATLAB CPU and memory profiling and discusses various tradeoffs in performance tuning. It describes both the application of standard industry techniques in MATLAB as well as methods that are specific to MATLAB, such as using different data types or built-in functions. The book covers MATLAB vectorization, parallelization, implicit and explicit optimization, memory management, chunking, and caching. It explains MATLAB's memory model and details how it can be leveraged. It describes the use of GPU, MEX, FPGA, and other forms of compiled code, as well as techniques for speeding up deployed applications. It details specific tips for MATLAB GUI, graphics, and I/O. It also reviews a wide variety of utilities, libraries, and toolboxes that can help to improve performance. Sufficient information is provided to allow readers to immediately apply the suggestions to their own MATLAB programs. Extensive references are also included to allow those who wish to expand the treatment of a particular topic to do so easily. Supported by an active website and numerous code examples, the book will help readers rapidly attain significant reductions in development costs and program run times.

Matlab untuk mempelajari pengolahan sinyal *Affect-Language Interactions in Native and Non-Native English Speakers*
Rafał Jończyk, 2016-12-28 This volume provides an up to date and evaluative review of theoretical and empirical stances on emotion and its close interaction with language and cognition in monolingual and bilingual individuals. Importantly it presents a novel methodological approach that takes into account contextual information and hence goes beyond the reductionist approach to affective language that has dominated contemporary research. Owing to this pragmatic approach the book presents brand new findings in the field of bilingualism and affect and offers the first neurocognitive interpretation of findings reported in clinical and introspective studies in bilingualism. This not only represents an invaluable contribution to the literature but may also constitute a breakthrough in the investigation of the worldwide phenomenon of bilingualism. Beginning with a thorough review of the history and current state of affective research and its relation to language spanning philosophical, psychological, neuroscientific and linguistic perspectives, the volume then proceeds to explore affect manifestation using neuropragmatic methods in monolingual and bilingual individuals. In doing so it brings together findings from clinical and introspective studies in bilingualism with cognitive psychophysiological and neuroimaging paradigms. By combining conceptual understanding and methodological expertise from many disciplines, this volume provides a comprehensive picture of the dynamic interactions between contextual and affective information in the language domain. Thus *Affect Language Interactions in Native and Non Native English Speakers: A Neuropragmatic Perspective* fosters a pragmatic approach to research on affective language processing in monolingual and bilingual population, one that builds bridges across disciplines and sparks important new questions in the cognitive neuroscience of bi and multilingualism.
