**Energy Developments: New Forms, Renewables, Conservation** Fred A. Curtis, 2013-09-17 Energy Developments: New Forms, Renewables, Conservation is a collection of papers that discusses alternative energy sources. In discussing these energy sources, the text considers factors such as technical, economic, and human dimensions. The first part of the text presents articles that cover forms of energy such as the feasibility of coal gasification and electric power from salinity gradients by reverse electrodialysis. Next, the book reviews materials about renewable forms of energy that include genetically improved hardwoods as a potential energy source and heat pump investigations for northern climate applications. In the last part, the text provides studies that deal with energy conservation such as shared savings financing for energy efficiency and consumer information and government energy conservation incentive programs. The book will be of use to scientists, engineers, and technicians involved in the research, development, and implementation of alternative energy technology.

**Geological Survey of Canada, Current Research (Online) no. 2002-C25** David Corrigan, 2002 This paper reports on the first field season of a new initiative designed to provide a regional tectonostratigraphic context for supracrustal plutonic rocks that form the northern flank of the Trans-Hudson Orogen. It reviews the regional geology of the Lynn Lake belt area of northern Manitoba, then presents results of potential tectonostratigraphic correlations with the Reindeer Lake area of Saskatchewan, as well as descriptions of supracrustal rocks in the Southern Indian Domain, Pukatawagan Bay, and Missi Falls-Partridge Breast Lake areas. **Biogeochemistry in Mineral Exploration** Colin E. Dunn, 2011-08-30 Significant refinements of biogeochemical methods applied to mineral exploration have been made during more than twenty years since the last major publication on this technique. This innovative, practical, and comprehensive text is designed as a field handbook and an office reference volume. It outlines the historical development of biogeochemical methods applied to mineral exploration and provides details of what, how, why, and when to collect samples from all major climatic environments, with examples from around the world. Recent commercialization of sophisticated analytical technology permits immensely more insight into the multi-element composition of plants. In particular,

precise determination of ultra trace levels of pathfinder elements in dry tissues and recognition of element distribution patterns with respect to concealed mineralization Data handling and interpretation are discussed in context of a wealth of previously unpublished information including a section on plant mineralogy much of which has been classified as confidential until recently Data are provided on the biogeochemistry of more than 60 elements and by case history examples their roles discussed in assisting in the discovery of concealed mineral deposits A look to the future includes the potential role of bacteria to provide new focus for mineral exploration Describes the practical aspects of plant selection and collection in different environments around the world and how to process and analyze them Discusses more than 60 elements in plants with data interpretation and case history results that include exploration for Au PGEs U base metals and kimberlites

**Geological Survey of Canada, Current Research (Online) no. 2000-C13** D. Corrigan, 2000 Describes results of field work in the northern region of Reindeer Lake on the northern Saskatchewan Manitoba border where mapping was carried out from the interior of the Proterozoic Wathaman Batholith to the Archean Peter Lake Domain The main objective was to establish the nature and timing of the contact relationship between the Archean craton margin and the Wathaman Batholith Evidence is also presented regarding the nature of the Swan River Pluton and similar bodies north west of the Batholith
