

THE ILO MARITIME LABOUR CONVENTION, 2006

GUIDANCE FOR SHIP OPERATORS ON PORT STATE CONTROL AS FROM 20 AUGUST 2013

INTRODUCTION

The International Shipping Federation (ISF) is the identity used by the International Chamber of Shipping (ICS) when acting as the international employers' organisation for ship operators. ISF co-ordinates the representation of shipowners at the International Labour Organisation (ILO) in the development of maritime labour standards.

As an official social partner under the tripartite ILO process, ISF was instrumental for negotiating the text of the ILO MLC with governments and seafarers' trade unions. ISF therefore has a very special interest in working to ensure the Convention's smooth implementation.

The membership of ISF and ICS comprises national shipowners' associations from 36 nations representing 92% of the world merchant fleet.

While this advice given in this guide has been developed using the best information currently available, it is intended to be used as guidance only. It is not intended to be used as a substitute for legal advice. The International Labour Organisation (ILO) is the only body that can issue a binding decision on any dispute. The ILO is not responsible for any consequences resulting directly or indirectly from compliance with or violation of guidance contained herein, even if issued by a failure to provide reasonable care.

On 20 August 2013, the ILO Maritime Labour Convention (MLC) will enter into force and ship operators will need to be ready.

At the 2006 Diplomatic Conference which adopted the MLC, ILO also adopted a Resolution which recommends that Port State Control (PSC) should not commence until 12 months after entry into force, i.e. August 2014. However, some port states, if they have ratified the MLC, may still decide to subject ships to PSC inspections to check compliance with the MLC from 20 August 2013.*

The following advice is intended to help ship operators avoid potential PSC problems.

The ILO MLC addresses a wide range of matters including shipping companies' obligations regarding seafarers' contractual arrangements, oversight of manning agencies, working hours, health and safety, crew accommodation, catering standards, and seafarers' welfare.

Provided that they put in the effort, the vast majority of companies should not have any difficulty complying with the substance of the Convention, which in large part is derived from existing ILO maritime standards and accepted good employment practice.

However, the enforcement mechanism is new. Shipping companies therefore must get to grips with the certification process in order to avoid port state control problems, and take appropriate measures in the event that flag states have not issued required documentation or guidance.

* Any remaining States, in conformity with article 19, are required to implement and ratify, according to their own procedures, the MLC by 20 August 2014, or failing this, must make PSC inspection of their vessels with other ILO member States, even if the port state has not ratified the MLC.

Autonomous Shipping Baris Soyer, Andrew Tettenborn, 2021-04-22 This collection of essays critically evaluates the legal framework necessary for the use of autonomous ships in international waters The work is divided into three parts Part 1 evaluates how far national shipping regulation and the public international law background that lies behind it may need modification and updating to accommodate the use of autonomous ships on international voyages Part 2 deals with private law and insurance issues such as collision and pollution liability salvage limitation of liability and allocation of risk between carrier and cargo interests Part 3 analyses international convention regimes dealing with maritime safety and other matters arguing for specific changes in the existing conventions such as SOLAS and MARPOL which would provide the international framework that is necessary for putting autonomous ships into commercial use The book also takes the view that amendment

of international conventions is important in the case of liability issues arguing that leaving such matters to national law particularly issues concerning product liability could not only restrict or hinder the availability of liability insurance but also hamper the development of technology in this field Written by internationally known experts in their respective areas the book offers a holistic approach to the debate on autonomous ships and makes a timely and important contribution to the literature
