Chapter 1

Trade in a Model with no Frictions

Exercise 1.1 (a) Equation 1.1 (Total amount of the consumption good in) $_t = N_t y_1 + N_{t-1} y_2$

- Equation 1.2 (Total consumption by the young) $_t = N_t c_{1t}$
- Equation 1.3 (Total consumption by the old) $_t = N_{t-1} c_{2t}$
- Equation 1.4 Feasibility constraint:

$$N_t c_{1t} + N_{t-1} c_{2t} \leq N_t y_1 + N_{t-1} y_2$$

With a constant population, we have,

$$N c_{1t} + N c_{2t} \leq N y_1 + N y_2$$

Dividing throughout by N , we have

- Equation 1.5 $c_{1t} + c_{2t} \leq y_1 + y_2$
- Equation 1.6 Assuming a stationary allocation, the per capita constraint becomes

$$c_1 + c_2 \leq y_1 + y_2$$

(b) $\{c_1, c_2\} \rightarrow$ Golden Rule Allocation: allocation that maximizes the utility of future generations.

FPL-PELPS Patricia K. Lebow, Henry Spelter, Peter J. Ince, 2003 This report provides documentation and user information for FPL PELPS a personal computer price endogenous linear programming system for economic modeling Originally developed to model the North American pulp and paper industry FPL PELPS follows its predecessors in allowing the modeling of any appropriate sector to predict consumption production and capacity by technology and trade within or among several regions or countries The theoretical structure is that of spatial equilibrium modeling under competitive market assumptions This report contains a mathematical description of the system including its extensions from previous versions and a detailed user's guide with an application of FPL PELPS

New Developments in Time Series Econometrics Jean-Marie Dufour, Baldev Raj, 2012-12-06 This book contains eleven articles which provide empirical applications as well as theoretical extensions of some of the most exciting recent developments in time series econometrics The papers are grouped around three broad themes I the modeling of

multivariate times series II the analysis of structural change III seasonality and fractional integration Since these themes are closely inter related several other topics covered are also worth stressing vector autoregressive VAR models cointegration and error correction models nonparametric methods in time series and fractionally integrated models Researchers and students interested in macroeconomic and empirical finance will find in this collection a remarkably representative sample of recent work in this area

Macroeconomic Policy Martin Weale, Andrew Blake, Nicos Christodoulakis, James Meade, David Vines, 2015-10-05 This analysis of macroeconomic policy originally published in 1989 argues that key government objectives such as reduced inflation decreased unemployment and an adequate level of national saving can be achieved only by employing both monetary and fiscal policies in conjunction with supply side policies expressly designed to improve the workings of the labour market Part 1 is a comparative analysis showing the effects of monetary and fiscal policy on the economy Real wage rigidity in the labour market is shown to have important consequences for the working of both types of policy because it conditions the economy's response to tax changes Part 2 presents an econometric model which combines consistent stock flow accounts with a full range of expectational effects Part 3 presents an innovative technique for solving rational expectations models with the need for arbitrary terminal conditions

Trade Theory in Computable General Equilibrium Models Peter B. Dixon, Michael Jerie, Maureen T. Rimmer, 2018-03-30 This book is for people who want to understand modern trade theory particularly the Melitz model It lays out Melitz theory from first principles and relates it to earlier theories of Armington and Krugman For trade theory specialists the book produces some significant conclusions It identifies conditions under which Krugman and Melitz models produce essentially the same results for the welfare effects of trade liberalization as those obtained from Armington and conditions under which this is not true These findings will be of interest to academics and policy advisors who need to understand critiques of Armington by proponents of Krugman and Melitz For computable general equilibrium CGE modelers the book shows how Melitz style CGE models can be calibrated solved and interpreted A major practical contribution of the book is to show how large scale Armington models such as GTAP can be converted to Melitz by the addition of a small number of equations and minimal alteration of the original Armington model The book describes computational experience in solving Melitz CGE models using GEMPACK software This experience will be of interest to researchers currently attempting to solve Melitz based CGE models Almost all previous Melitz studies have used GAMS software Authors of these studies have reported computational difficulties These difficulties did not occur in this book's GEMPACK based computations The book concludes that a CGE modelers can embrace Melitz while retaining their Armington based models as powerful interpretive devices and b via GEMPACK large scale CGE models incorporating Melitz specifications can be solved with no more difficulty than similar dimensioned Armington models
