Chapter 1

Trade in a Model with no Frictions

Exercise 1.1 (a) Equation 1.1 (Total amount of the consumption good in) $_t = N_t y_1 + N_{t-1} y_2$

- Equation 1.2 (Total consumption by the young) $_t = N_t c_{1t}$
- Equation 1.3 (Total consumption by the old) $_t = N_{t-1} c_{2t}$
- Equation 1.4 Feasibility constraint:

$$N_t c_{1t} + N_{t-1} c_{2t} \leq N_t y_1 + N_{t-1} y_2$$

With a constant population, we have,

$$N c_{1t} + N c_{2t} \leq N y_1 + N y_2$$

Dividing throughout by N , we have

- Equation 1.5 $c_{1t} + c_{2t} \leq y_1 + y_2$
- Equation 1.6 Assuming a stationary allocation, the per capita constraint becomes

$$c_1 + c_2 \leq y_1 + y_2$$

(b) $\{c_1, c_2\} \rightarrow$ Golden Rule Allocation: allocation that maximizes the utility of future generations.

European Economic Governance Willem Molle, 2011-03-01 In the course of its development the EU has had to deal with an expanding policy agenda covering ever more subjects and an increased diversity of instruments It has also had to deal with an increased number of member states and an extended range of partners regional authorities non governmental organisations These developments have greatly increased the risk of inconsistencies between the various policies pursued and between the various levels of competence for the same policy Inconsistent policies are less effective than they ought to be So they imply a welfare loss The EU has tried to cope with the challenge of consistency by adapting its governance Traditionally it uses mainly the regulatory method The effectiveness of this method has recently come into question So alternative methods are now favoured One is the financial method which implies more expenditure via the EU budget The other is coordination The application of both methods has certain advantages and disadvantages The problem for policy makers is then to determine the choice between the modes first and the optimal level of budgetary and coordination efforts next Notwithstanding its obvious policy relevance the problem has got little attention from academia This book sets out to

contribute to a solution by following two approaches The first is a systematisation of the theoretical and conceptual underpinnings of the financial and coordination methods The second is an empirical investigation into a range of European policy processes implying to different degrees budgetary outlays and coordination *Fintech Applications for Boosting Climate Finance* Ms. Elena Loukoianova,Fabio Natalucci,Mr. Fabio M Natalucci,Yi David Wang,Shiho Kanada,2024-12-09 Climate fintech the intersection between climate change financial services and digital technologies is playing an important role in attracting more investment into climate finance by leveraging innovative technologies thereby addressing some financing barriers While recognizing that technology alone can only be a partial solution the note outlines how fintech can help address financing challenges for climate investments It also details the beneficial features of emerging financial technologies in climate finance and explores the limitations of fintech tools In addition the note emphasizes private sector efforts in this area drawing on discussions with market participants private sector and regulatory bodies Finally it elicits several lessons learned and discusses potential policy implications focusing on improving quality and accessibility of climate data developing digital infrastructure improving the availability of financing and the liquidity of financial instruments for climate investments and ensuring appropriate environmental and financial regulation Even though technology offers considerable promise for supporting climate finance it can only partially alleviate certain barriers while carrying risks that will need to be carefully managed Fintech should be an integral part of the overall policy solution to help address challenges in scaling up climate finance *Journal of Economic Literature* ,2001 **Health planning reports subject index** United States.
