Thompson, Ruth F. Chadwick, 2007-07-23 It is difficult to think of an example of an advancement in the biological sciences that has had an impact on society similar to that of the new genetics. Recent developments in biotechnology have occasioned much discussion among academics, professionals and lay people alike. In particular, many questions and concerns have arisen over the acquisition, access and control of genetic information. There are several reasons why the new genetics has commanded such widespread attention and why it is now the subject of considerable debate. Special reference is given in this volume to the implications of genetic information for five different subject areas: eugenics, the insurance industry, the commercialisation of genetic testing, strategies for raising public awareness and the value of theoretical, ethical and sociological frameworks in the debate. This diverse collection of papers attempts to address and critically discuss issues surrounding the control of and access to genetic information from ethical, medical, legal and theoretical points of view. The first and shortest section of the book attempts to address concerns over the eugenic potential of new biotechnologies. It also provides a historical context for the debate for controversy over the subject of eugenics predates the current debate over genetic information by a considerable length of time. Indeed, by the time the first patent was issued for Chakrabarty's strain of oil-eating bacteria in the early 1970s, the term eugenics had already acquired strong pejorative connotations.

Making Sense of Nature Noel Castree, 2013-08-15 We listen to a cacophony of voices instructing us how to think and feel about nature, including our own bodies. The news, media, wildlife documentaries, science magazines and environmental NGOs are among those clamouring for our attention. But are we empowered by all this knowledge, or is our dependence on various communities allowing our thoughts, sentiments and activities to be unduly governed by others? *Making Sense of Nature* shows that what we call nature is made sense of for us in ways that make it central to social order, social change and social dissent. By utilising insights and extended examples from anthropology, cultural studies, human geography, philosophy, politics, sociology, science studies, this interdisciplinary text asks whether we can better make sense of nature for ourselves and thus participate more meaningfully in momentous decisions about the future of life, human and non-human, on the planet. This book shows how nature can be made sense of without presuming its naturalness. The challenge is not so much to rid ourselves of the idea of nature and its collateral concepts such as genes, but instead we need to be more alert to how, why and with what effects ideas about nature get fashioned and deployed in specific

situations Among other things the book deals with science and scientists the mass media and journalists ecotourism literature and cinema environmentalists advertising and big business This innovative text contains numerous case studies and examples from daily life to put theory and subject matter into context as well as study tasks a glossary and suggested further reading The case studies cover a range of topics range from forestry in Canada and Guinea to bestiality in Washington State to how human genetics is reported in Western newspapers to participatory science experiments in the UK Making Sense of Nature will empower readers from a wide range of fields across the social sciences humanities and physical sciences
