**Anecdotal Evidence** Sean Cubitt, 2020-01-10 Ecocritique is a practice of radical questioning as essential to the critical armoury as feminism and postcolonialism have become. Like them it extends beyond judgements about texts with clear ecological themes demonstrating the significance of ecocriticism for any advanced understanding of cultural forms. Anecdotal method is ecocritical because it focuses on encounters concentrated moments of crisis when social ordering and ecological forces clash. The anecdote's power to produce events meanings and history forms a methodological entry to aesthetic politics. Anecdotal Evidence provides an outline of the need for and principles of anecdotal method a case study of eco critical themes in Hollywood films shaped by the Global Financial Crisis and a confrontation with mass image databases of social and streaming media that due to their scale and organisation appear at first immune to anecdotal method. Only because the environment has a history is it possible to intervene environmentally. Because we continually misrecognise the historical production of environments the first task of ecocritique is to bring our formative concept of ecology into crisis. Its final task will be to achieve the good life for everything connected by the historical implication of humans in ecology and ecology in humans. No politics can be undertaken in our times except through media. Ecocritical humanities have a key role in rethinking ecopolitics in the 21st century.

**Samuel Pepys, Isaac Newton, James Hodgson, and the Beginnings of Secondary School Mathematics** Nerida F. Ellerton, M. A. (Ken) Clements, 2017-03-02 This book tells one of the greatest stories in the history of school mathematics. Two of the names in the title Samuel Pepys and Isaac Newton need no introduction and this book draws attention to their special contributions to the history of school mathematics. According to Ellerton and Clements during the last quarter of the seventeenth century Pepys and Newton were key players in defining what school mathematics beyond arithmetic and elementary geometry might look like. The scene at which most of the action occurred was Christ's Hospital which was a school ostensibly for the poor in central London. The Royal Mathematical School RMS was established at Christ's Hospital in 1673. It was the less well known James Hodgson a fine mathematician and RMS

master between 1709 and 1755 who demonstrated that topics such as logarithms plane and spherical trigonometry and the application of these to navigation might systematically and successfully be taught to 12 to 16 year old school children From a wider history of school education perspective this book tells how the world s first secondary school mathematics program was created and how slowly but surely what was being achieved at RMS began to influence school mathematics in other parts of Great Britain Europe and America The book has been written from the perspective of the history of school mathematics Ellerton and Clements s analyses of pertinent literature and of archival data and their interpretations of those analyses have led them to conclude that RMS was the first major school in the world to teach mathematics beyond arithmetic on a systematic basis to students aged between 12 and 16 Throughout the book Ellerton and Clements examine issues through the lens of a lag time theoretical perspective From a historiographical perspective this book emphasizes how the history of RMS can be portrayed in very different ways depending on the vantage point from which the history is written The authors write from the vantage point of international developments in school mathematics education and therefore their history of RMS differs from all other histories of RMS most of which were written from the perspective of the history of Christ s Hospital
