Handbook of Bibliometric Indicators Roberto Todeschini,Alberto Baccini,2016-08-22 At last the first systematic guide to the growing jungle of citation indices and other bibliometric indicators Written with the aim of providing a complete and unbiased overview of all available statistical measures for scientific productivity the core of this reference is an alphabetical dictionary of indices and other algorithms used to evaluate the importance and impact of researchers and their institutions In 150 major articles the authors describe all indices in strictly mathematical terms without passing judgement on their relative merit From widely used measures such as the journal impact factor or the h index to highly specialized indices all indicators currently in use in the sciences and humanities are described and their application explained The introductory section and the appendix contain a wealth of valuable supporting information on data sources tools and techniques for bibliometric and scientometric analysis for individual researchers as well as their funders and publishers

Region And Trade, The: New Analytical Directions Amitrajeet A Batabyal,Peter Nijkamp,2015-06-11 Although international trade has been much studied by both economists and regional scientists the nature causes and the consequences of interregional trade i e trade between regions within countries has received far less attention In addition given recent advances in new economic geography on the theoretical front and in the development of both input output and computable general equilibrium models on the empirical front the important subject of interregional trade is now open to study using these theoretical and empirical methodologies Given this state of affairs this book aims to

present chapters written by a carefully selected group of experts in the field and thereby shed valuable light on key outstanding questions concerning the region and trade. These questions include but are not limited to the role of external economies in shaping the pattern of interregional trade, the role of natural resources versus traditional factors of production such as labor and capital in driving interregional trade, the relationship between transport and interregional trade, high value interregional trade in services and the role of interregional trade estimation in the construction of a multi regional input output system.

Springer Handbook of Science and Technology Indicators Wolfgang Glänzel, Henk F. Moed, Ulrich Schmoch, Mike Thelwall, 2019-10-30. This handbook presents the state of the art of quantitative methods and models to understand and assess the science and technology system. Focusing on various aspects of the development and application of indicators derived from data on scholarly publications, patents and electronic communications, the individual chapters written by leading experts discuss theoretical and methodological issues, illustrate applications, highlight their policy context and relevance and point to future research directions. A substantial portion of the book is dedicated to detailed descriptions and analyses of data sources, presenting both traditional and advanced approaches. It addresses the main bibliographic metrics and indexes such as the journal impact factor and the h index, as well as altmetric and webometric indicators and science mapping techniques on different levels of aggregation and in the context of their value for the assessment of research performance as well as their impact on research policy and society. It also presents and critically discusses various national research evaluation systems. Complementing the sections reflecting on the science system, the technology section includes multiple chapters that explain different aspects of patent statistics, patent classification and database search methods to retrieve patent related information. In addition, it examines the relevance of trademarks and standards as additional technological indicators. The Springer Handbook of Science and Technology Indicators is an invaluable resource for practitioners, scientists and policy makers wanting a systematic and thorough analysis of the potential and limitations of the various approaches to assess research and research performance.

The Policies and Politics of Interdisciplinary Research Séverine Louvel,2020-11-29

Interdisciplinary research centers are blooming in almost every university and interdisciplinary research is expected to be a cure all for the ills of academic science Do disciplines still matter To what extent are interdisciplinary problem solving approaches driven by socioeconomic stakeholders and policymakers rather than by academics And how is interdisciplinarity organized Through an in depth sociological study of the development of nanomedicine in France and in the United States an area that combines nanotechnology and biomedical research this book challenges two conventional views of interdisciplinary research and academic disciplines First disciplines do not merely form separate siloes which hinder the development of interdisciplinary research rather they are flexible entities whose evolution supports the long term institutionalization of interdisciplinary science in French and US academia Secondly interdisciplinary research has no intrinsic virtue its ability to respond to societal issues and advance knowledge depends on continued political support and long term cooperation between stakeholders Interdisciplinarity might also be threatened by oversold promises and struggles for recognition A study of the many challenges facing the formation of creative and sustainable interdisciplinary scientific communities The Policies and Politics of Interdisciplinary Research tackles vivid debates among academics and research managers and will appeal to scholars of sociology science and technology studies and science policy

[The Controversy over Marine Protected Areas](#)
Alex Caveen,Nick Polunin,Tim Gray,Selina Marguerite Stead,2014-10-17 This book is a critical analysis of the concept of marine protected areas MPAs particularly as a tool for marine resource management It explains the reasons for the extraordinary rise of MPAs to the top of the political agenda for marine policy and evaluates the scientific credentials for the

unprecedented popularity of this management option The book reveals the role played by two policy networks epistemic community and advocacy coalition in promoting the notion of MPA showing how advocacy for marine reserves by some scientists based on limited evidence of fisheries benefits has led to a blurring of the boundary between science and politics Second the study investigates whether the scientific consensus on MPAs has resulted in a publication bias whereby pro MPA articles are given preferential treatment by peer reviewed academic journals though it found only limited evidence of such a bias Third the project conducts a systematic review of the literature to determine the ecological effects of MPAs and reaches the conclusion that there is little proof of a positive impact on finfish populations in temperate waters Fourth the study uses discourse analysis to trace the effects of a public campaigning policy network on marine conservation zones MCZs in England which demonstrated that there was considerable confusion over the objectives that MCZs were being designated to achieve The book s conclusion is that the MPA issue shows the power of ideas in marine governance but offers a caution that scientists who cross the line between science and politics risk exaggerating the benefits of MPAs by glossing over uncertainties in the data which may antagonise the fishing industry delay resolution of the MPA issue and weaken public faith in marine science if and when the benefits of MCZs are subsequently seen to be limited **Against Plagiarism**

Yuehong (Helen) Zhang,2015-10-28 This is the first volume of a book series dedicated to Qualitative and Quantitative Analysis of Scientific and Scholarly Communication Fighting plagiarism is a the top priority for STM publishing A practical guide will importantly contribute to the awareness of the relevant communities bringing to the surface the basic rules and examples from the literature Engineered immune cells in cancer immunotherapy (EICCI) Cristina Maccalli,Axel Schambach,Francisco Martin,Cameron Turtle,2023-02-28 Developments in Management Science in Engineering 2017 Jiuping Xu,2018-11-23 Management science in engineering MSE is playing an increasingly important role in modern society In particular the development of efficient and innovative managerial tools has significantly influenced the research progress of management science As research is vital for the propagation of leading edge methods journal evaluation and classification are critical for scientists researchers engineers practitioners and graduate students This book identifies the main research categories of MSE and evaluates and classifies each MSE journal It represents the outcome of joint efforts from scientific board members research fellows and members of various professional societies It is ideal for scientists researchers practitioners engineers graduate students and upper level undergraduates in engineering management civil engineering industrial engineering environmental engineering energy engineering information engineering and agricultural engineering

Education Scholarship in Healthcare April S. Fitzgerald,Gundula Bosch,2023-11-28 Academic medical centers continue to require evidence of scholarly activity for their faculty to maintain their appointment and to advance in promotion rank For some training to know how to obtain evidence of scholarship was obtained through fellowship where information was passed from mentor to mentee in an apprenticeship fashion without a formalized text to follow to obtain the information

In fellowship information might flow through word of mouth or articles handed down out to a mentee Others in fellowship develop skills by taking classes as part of an additional master s degree program such as a Master of Public Health For health professionals who enter an academic institution without having gone through a fellowship program they are still expected to perform scholarly activity but don t have the benefit of having done the apprenticeship to learn the skills so unless they decide to find a course obtain a master s degree or find a fellowship they have no way to gain the necessary skills and are at risk of losing their appointment and have no hope of progressing in promotion This text provides a comprehensive toolbox for the academic who needs these skills to survive It serves as a valuable resource for health professionals physicians nurses pharmacists physical therapists and allied professionals as well as scientists and students with the steps necessary to take their educational endeavors from idea to implementation through dissemination Beginning with the concept of What is Scholarship the authors walk the reader through the concepts of how to find your niche look through the literature to check for a gap design a question consider evaluation and outcomes be aware of ethical considerations plan a project look for support find mentorship prepare an abstract present a poster disseminate a project and lead a team All chapters are written by experts in the subject matter
