is natural when the bio stains of original artworks have occurred over time by chance and another induced by *Aspergillus niger* in bio simulation on known papers in a controlled environment The findings are intended to provide guidance for preservation strategies mitigating the biodeterioration of paper and designing conservation treatment when applicable The surface of artworks and artifacts is of great aesthetic and artistic importance conversely it plays a significant role in governing fungal attachments In this book the paper surface is characterized in detail and in correlation with chemical and physical alterations caused by fungal pigmentation A broad range of analytical instruments was used for surface characterization such as surface metrology profilometers a confocal laser scanning microscope and environmental scanning electron microscope chemical microanalysis was carried out using X ray energy dispersive spectroscopy The novel three dimensional characterization of pigmented fungal inclusions and their interaction with paper matrix was studied with micro X ray computed micro tomography on the synchrotron ESRF The proposed book is the first to explore the complexity of fungal paper interactions with the intention to assist professionals working with cultural materials especially paper based materials to make informed decisions when dealing with the fungi infestation of paper Regional Industrial Buying Guide ,2004
