Landscapes of Collectivity in the Life Sciences Snait B. Gissis, Ehud Lamm, Ayelet Shavit, 2018-01-12 Broad perspective on collectivity in the life sciences from microorganisms to human consensus and the theoretical and empirical opportunities and challenges Many researchers and scholars in the life sciences have become increasingly critical of the traditional methodological focus on the individual This volume counters such methodological individualism by exploring recent and influential work in the life sciences that utilizes notions of collectivity sociality rich interactions and emergent phenomena as essential explanatory tools to handle numerous persistent scientific questions in the life sciences. The contributors consider case studies of collectivity that range from microorganisms to human consensus discussing theoretical and empirical challenges and the innovative methods and solutions scientists have devised The contributors offer historical philosophical and biological perspectives on collectivity and describe collective phenomena seen in insects the immune system communication and human collectivity with examples ranging from cooperative transport in the longhorn crazy ant to the evolution of autobiographical memory They examine ways of explaining collectivity including case studies and modeling approaches and explore collectivity s explanatory power They present a comprehensive look at a specific case of collectivity the Holobiont notion the idea of a multi species collective a host and diverse microorganisms and the hologenome theory which posits that the holobiont and its hologenome are a unit of adaption The volume concludes with reflections on the work of the late physicist Eshel Ben Jacob pioneer in the study of collective phenomena in living systems Contributors Oren Bader John Beatty Dinah R Davison Daniel Dor Ofer Feinerman Raghavendra Gadagkar Scott F Gilbert Snait B Gissis Deborah M Gordon James Griesemer Zachariah I Grochau Wright Erik R Hanschen Eva Jablonka Mohit Kumar Jolly Anat Kolumbus Ehud Lamm Herbert Levine Arnon Levy Xue Fei Li Elisabeth A Lloyd Yael Lubin Eva Maria Luef Ehud Meron Richard E Michod Samir Okasha Simone Pika Joan Roughgarden Eugene Rosenberg Ayelet Shavit Yael Silver Alfred I Tauber Ilana Zilber Rosenberg Science, the State and the City Geoffrey Owen, Michael M. Hopkins, 2016-04-15 The book examines the evolution of one of the most important technologies that has emerged in the last fifty years biotechnology the use of living organisms or parts thereof to create useful products and services The most important application of biotechnology has been in medicine in the development of new drugs The central purpose of the book is to explain how firms based in the US took the lead in commercialising the technology and why it has been so difficult for firms in other countries to match what the leading American companies have achieved The book looks at the institutions and policies which have underpinned US success in biotechnology This is the US innovation ecosystem and it is made up of several interlocking elements which constitute a powerful competitive advantage for US biotechnology firms These include a higher education system which has close links with industry massive support from the Federal government for biomedical research and a financial system which is well equipped to support young entrepreneurial firms in a science based industry In the light of US experience the book

examines in detail the performance of UK biotechnology firms over the past forty years starting with the creation of the UK s first dedicated biotech firm Celltech in 1980 The book shows how the UK made a promising start in the 1980s and 1990s but failed to build on it Several leading firms failed and after an initial burst of enthusiasm investors lost confidence in the British biotech sector It is only the last few years that the sector has staged a revival attracting fresh investment from the US as well from the UK The story told in this book based on extensive interviews with industry participants investors and policy makers in the UK Continental Europe and the US sheds new light on one of the central issues facing governments in the advanced industrial countries how to create and sustain new science based industries *Neuroanatomy for the XXIst Century* Kathleen S. Rockland, Javier DeFelipe, 2016-08-15 An explosion of new techniques with vastly improved visualization and sensitivity is leading a veritable revolution in modern neuroanatomy Basic questions related to cell types input localization and connectivity are being re visited and tackled with significantly more accurate and higher resolution experimental approaches A major goal of this e Book is thus to highlight in one place the impressive range of available techniques even as these are fast becoming routine This is not meant as a technical review however but rather will project the technical explosion as indicative of a field now in a vibrant state of renewal Thus contributions will be mainly research articles using the newer techniques A second goal is to showcase what has become the conspicuous interdisciplinary reach of the field neuroanatomical standards and the close association of structure function and underlying circuitry mechanisms are increasingly relevant to investigations in development physiology and disease Another feature of this Research Topic is that it includes a breadth of cross species contributions from investigators working with rodent nonhuman primate and human brains This is important since most of our current knowledge of brain structure has been obtained from experimental animals However recent technical advances coupled with researcher willingness to use the human tissue available will undoubtedly lead to major advances in the near future regarding human brain mapping and connectomes Thus of particular interest will be the methods that can help to define general wiring principles in the brain both structural and functional Overall the state of the field is exciting The SAGE Encyclopedia of Surveillance, Security, and Privacy Bruce A. Arrigo, 2016-06-15 In all levels of social structure from the personal to the political to the economic to the judicial The SAGE Encyclopedia of Surveillance Security and Privacy uncovers and explains how surveillance has come to be an integral part of how our contemporary society operates worldwide Marine Polysaccharides Volume 2 Paola Laurienzo, 2018-04-24 This book is a printed edition of the Special Issue Marine Polysaccharides that was published in Marine Drugs Salicylic Acid Sianalina Networks Hua Lu, Jean Toby Greenberg, Loreto Holuigue, 2016-05-26 The small phenolic compound salicylic acid SA is critical for plant defense against a broad spectrum of pathogens SA is also involved in multi layered defense responses from pathogen associated molecular pattern triggered basal defense resistance gene mediated defense to systemic acquired resistance Recent decades have witnessed tremendous progress towards our understanding of SA mediated signaling

networks Many genes have been identified to have direct or indirect effect on SA biosynthesis or to regulate SA accumulation Several SA receptors have been identified and characterization of these receptors has shed light on the mechanisms of SA mediated defense signaling which encompass chromosomal remodeling DNA repair epigenetics to transcriptional reprogramming Molecules from plant associated microbes have been identified which manipulate SA levels signaling SA does not act alone It engages in crosstalk with other signaling pathways such as those mediated by other phytohormones in an agonistic or antagonistic manner depending on hormones and pathosystems Besides affecting plant innate immunity SA has also been implicated in other cellular processes such as flowering time determination lipid metabolism circadian clock control and abiotic stress responses possibly contributing to the regulation of plant development. The multifaceted function of SA makes it critically important to further identify genes involved in SA signaling networks understand their modes of action and delineate interactions among the components of SA signaling networks In addition genetic manipulation of genes involved in SA signaling networks has also provided a promising approach to enhance disease resistance in economically important plants This ebook collects articles in the research topic Salicylic Acid Signaling Networks For this collection we solicited reviews perspectives and original research articles that highlight recent exciting progress on the understanding of molecular mechanisms underlying SA mediated defense SA crosstalk with other pathways and how microbes impact these Services In Global Value Chains: Manufacturing-related Services Patrick Low, Gloria O Pasadilla, 2016-06-21 This compilation of 22 firm specific case studies is an important contribution to the discussion of servicification trends in manufacturing Services have increased in importance and value in many manufacturing value chains making companies that produce physical products look more like service enterprises What services do global value chains use in their operations how important are they and how do economic policies shape firms configurations operations and location of global value chains This book addresses these questions and more The interviewed firms based in 12 APEC economies come from different sectors ranging from multinational automotive construction equipment and electrical appliance manufacturers to small and medium manufacturers of watches or chemical for water treatment The book analyses what specific services are important in different stages of the value chain and whether they are typically provided in house or outsourced Research Handbook on Intellectual Property and Technology Transfer Jacob H. reduction of poverty and the burden of vector borne diseases such as malaria and dengue which disproportionately impact low and middle income countries However due to their intrinsic qualities of rapid spread and irreversibility gene drive systems raise many questions with respect to their safety relative to public and environmental health Because gene drive systems are designed to alter the environments we share in ways that will be hard to anticipate and impossible to completely roll back questions about the ethics surrounding use of this research are complex and will require very careful exploration Gene Drives on the Horizon outlines the state of knowledge relative to the science ethics public engagement and risk assessment as they pertain to research directions of gene drive systems and governance of the research process This report offers principles for responsible practices of gene drive research and related applications for use by investigators their institutions the research funders and regulators Biopharmaceutical Processing Gunter Jagschies, Eva Lindskog, Karol Lacki, Parrish M. The integrity of the bioprocess ultimately determines the quality of the product in the biotherapeutics arena and this book covers every stage including all technologies related to downstream purification and upstream processing fields Economic considerations are included throughout with recommendations for lowering costs and improving efficiencies Designed for quick reference and easy accessibility of facts calculations and guidelines this book is an essential tool for industrial scientists and managers in the biopharmaceutical industry Offers a comprehensive go to reference for daily work decisions Covers both upstream and downstream processes Includes case studies that emphasize financial outcomes Presents summaries decision grids graphs and overviews for quick reference **International Plant Proteomics** Organization (INPPO) World Congress 2014 Joshua L. Heazlewood, Jesús V. Jorrín-Novo, Ganesh Kumar Agrawal, Silvia Mazzuca, Sabine Lüthje, 2017-02-08 The field of proteomics has advanced considerably over the past two decades The ability to delve deeper into an organism's proteome identify an array of post translational modifications and profile differentially abundant proteins has greatly expanded the utilization of proteomics Improvements to instrumentation in conjunction with the development of these reproducible workflows have driven the adoption and application of this technology by a wider research community However the full potential of proteomics is far from being fully exploited in plant biology and its translational application needs to be further developed In 2011 a group of plant proteomic researchers established the International Plant Proteomics Organization INPPO to advance the utilization of this technology in plants as well as to create a way for plant proteomics researchers to interact collaborate and exchange ideas The INPPO conducted its inaugural world congress in mid 2014 at the University of Hamburg Germany Plant proteomic researchers from around the world were in attendance and the event marked the maturation of this research community The Research Topic captures the opinions ideas

and research discussed at the congress and encapsulates the approaches that were being applied in plant proteomics <u>Linguistic Influences on Mathematical Cognition</u> Ann Dowker, Hans-Christoph Nuerk, 2017-06-16 For many years an abstract amodal semantic magnitude representation largely independent of verbal linguistic representations has been viewed as the core numerical or mathematical representation This assumption has been substantially challenged in recent years Linguistic properties affect not only verbal representations of numbers but also numerical magnitude representation spatial magnitude representations calculation parity representation place value representation and even early number acquisition Thus we postulate that numerical and arithmetic processing are not fully independent of linguistic processing This is not to say that in patients magnitude processing cannot function independently of linguistic processing we just suppose these functions are connected in the functioning brain So far much research about linguistic influences on numerical cognition has simply demonstrated that language influences number without investigating the level at which a particular language influence operates After an overview we present new findings on language influences on seven language levels Conceptual Conceptual properties of language Syntactic The grammatical structure of languages beyond the word level influences Semantic The semantic meaning or existence of words Lexical The lexical composition of words in particular number words Visuo spatial orthographic Orthographic properties such as the writing reading direction of a language Phonological Phonological phonetic properties of languages Other language related skills Verbal working memory and other cognitive skills related to language representations We hope that this book provides a new and structured overview on the exciting influences of linguistic processing on numerical cognition at almost all levels of language processing Recent Insights into Honey Bee Waggle Dance Communications Roger Schürch, Margaret J. fungus mycoremediation and plants phytoremediation to bind extract and clean up contaminants pollutants and toxins from soil groundwater and other environments This book is of interest to researchers scientists and academic faculty in environmental sciences Also it serves as additional reading and reference material for undergraduate and graduate students as well as postdocs in environmental agriculture ecology and soil sciences National and International policy makers will also Domains of Freedom Thembela Kepe, Melissa Levin, Bettina von find valuable information from this book Lieres, 2016-09-12 After more than 20 years of freedom in South Africa we have to ask ourselves difficult questions are we willing to perpetuate a lie search for facts or think wishfully Freedom has been enabled by apartheid s end but at the same time some of apartheid's key institutions and social relations are reproduced under the guise of democracy This collection of essays acknowledges the enormous expectations placed on the shoulders of the South African revolution to produce an alternative political regime in response to apartheid and global neo liberalism It does not lament the inability of South Africa s democracy to provide deeper freedoms or suggest that since it hasn t this is some form of betrayal Freedom is made possible and or limited by local political choices contemporary global conditions and the complexities of social change This book explores the multiplicity of spaces within which the dynamics of social change unfold and the complex ways in which power is produced and reproduced In this way it seeks to understand the often non linear practices through which alternative possibilities emerge the lengthy and often indirect ways in which new communities are imagined and new solidarities are built In this sense this book is not a collection of hope or despair Nor is it a book that seeks to situate itself between these two poles Instead it aims to read the present historically critically and politically and to offer insights into the ongoing iterative and often messy struggles for freedom Managing Discovery in the Life Sciences Philip A. Rea, Mark V. Pauly, Lawton R. Burns, 2018-02-01 In this book distinguished scholars Philip A Rea Mark V Pauly and Lawton R Burns explore the science and management behind marketable biomedical innovations. They look at how the science actually played out through the interplay of personalities the cultures within and between academic and corporate entities and the significance of serendipity not as a mysterious phenomenon but one intrinsic to the successes and failures of the experimental approach With newly aggregated data and case studies they consider the fundamental economic underpinnings of investor driven discovery management not as an obstacle or deficiency as its critics would contend or as something beyond reproach as some of its proponents might claim but as the only means by which scientists and managers can navigate the unknowable to discover new products and decide how to sell them so as to maximize the likelihood of establishing a sustainable pipeline for still more marketable biomedical innovations Improving Animal Welfare through Genetic Selection Wendy Mercedes Rauw, 2016-07-12 In livestock species breeding goals are aimed primarily at improvement of production traits However there are a number of examples where selection for high production efficiency has resulted in reduced welfare through unfavorable outcomes in health and fitness characteristics. These effects raise questions about what

is ethically acceptable in animal breeding Welfare problems may be experienced when physiological balance is disturbed by genetic selection for high production alone by a mismatch between the environmental challenges and the range of coping responses available to an animal or from a mismatch between the animal s needs and their degree of satisfaction This may be resolved by either improving the environment to support the animal but also by providing the animal through genetic selection with means to adapt to the production environment The Standing Committee of the European Convention for the Protection of Animals kept for Farming Purposes emphasizes that breeding goals should include health and welfare The Farm Animal Welfare Council pleas for a greater emphasis in breeding programs on traits associated with good welfare However although breeding goals in most farm animal species have been broadened beyond production traits to include functional traits behavioral traits are rarely included despite their potential to improve animal production and welfare It is the goal of the present Research Topic to bring together experimental and theoretical research focusing on the genetics of welfare traits and the possibility to improve animal welfare through selection This topic presents an overview of the relationship between selection for high production and livestock robustness examples of improving robustness through the introduction of novel traits in livestock breeding and a discussion on selection methods to address welfare issues The discussion on sustainability of breeding practices is very alive today and will remain to be an important part of the debate in the future
