Image Morphing Prep

Using MATLAB, carefully select two images of your own choice to create landmarks on both images.

1. Select two images, im1 and im2, of exactly the same size (you can resize the images using align_images.m if necessary)
2. Use MATLAB function *cpselect(im1, im2)* to define at least 40 pairs of corresponding landmarks on the two images by hand (more landmarks means better morphing)
3. Save the resulting two sets of landmarks
4. Use MATLAB function *plot* or *scatter* to show resulting images with landmarks
5. Store the resulting two sets of landmarks as text files.
6. Store the resulting images (with landmarks on them) as jpg files.

Biometric Inverse Problems Svetlana N. Yanushkevich,Adrian Stoica,Vlad P. Shmerko,Denis V. Popel,2018-10-08 Traditional methods of biometric analysis are unable to overcome the limitations of existing approaches mainly due to the lack of standards for input data privacy concerns involving use and storage of actual biometric data and unacceptable accuracy Exploring solutions to inverse problems in biometrics transcends such limits and allows rich analysis of biometric information and systems for improved performance and testing Although some particular inverse problems appear in the literature until now there has been no comprehensive reference for these problems Biometric Inverse Problems provides the first comprehensive treatment of biometric data synthesis and modeling This groundbreaking reference comprises eight self contained chapters that cover the principles of biometric inverse problems basics of data structure design new automatic synthetic signature fingerprint and iris design synthetic faces and DNA and new tools for biometrics based on Voronoi diagrams Based on the authors vast experience in the field the book authoritatively examines new approaches and methodologies in both direct and inverse biometrics providing invaluable analytical and benchmarking tools The authors include case studies examples and implementation codes for practical illustration of the methods Loaded with approximately 200 figures 60 problems 50 MATLAB code fragments and 200 examples Biometric Inverse Problems sets the standard for innovation and authority in biometric data synthesis modeling and analysis   **Image Analysis and Recognition** Aurélio Campilho,Mohamed Kamel,2006-09-21 The two volume set LNCS 4141 and LNCS 4142 constitutes the refereed proceedings of the Third International Conference on Image Analysis and Recognition ICIAR 2006 The volumes present 71 revised full papers and 92 revised poster papers together with 2 invited lectures Volume II includes papers on pattern recognition for image analysis computer vision biometrics shape and matching brain imaging remote sensing image processing and more

Medical and Biological Image Analysis ,2018-07-04 This book deals with medical image analysis methods In

particular it contains two significant chapters on image segmentation as well as some selected examples of the application of image analysis and processing methods Despite the significant development of information technology methods used in modern image analysis and processing algorithms the segmentation process remains open This is mainly due to intra patient variability and or scene diversity Segmentation is equally difficult in the case of ultrasound imaging and depends on the location of the probe or the contact force Regardless of the imaging method segmentation must be tailored for a specific application in almost every case These types of application areas for various imaging methods are included in this book
