

T11281 and number 22 tester with lead out from tool T8996 and refer to following trouble-shooting procedures:

Check and make sure ignition malfunction is not due to spark plug or ignition coil failure. If spark is absent at both cylinders, check condition of charge coil as follows: Separate the blue and yellow wire connection between charge coil and CD ignition module and attach double wire plug adapter to wire plug from charge coil as shown in Fig. P5-6.

Attach red (P) lead from tester number 22 to red sleeved adapter wire marked "Plug 2." Attach yellow (N) lead of number 22 tester and yellow sleeved adapter wire marked "Plug 1" to engine ground. Place tester switch in number 2 position and crank engine. If tester lamp does not light, low voltage windings of charge coil are defective and stator should be renewed. If lamp lights, continue charge coil test by disconnecting yellow sleeved wire adapter from engine

ground and attaching it to red (P) lead of T8953 tester as shown in Fig. P5-7. Attach yellow (N) lead of T8953 tester to engine ground. Turn tester switch to position 10 and crank engine. If tester lamp does not light, high voltage windings of charge coil are defective and stator should be renewed. If lamp lights, charge coil operation is satisfactory and trigger coil and CD ignition module circuits for each cylinder must be checked. Remove tester and plug adapter set, then reconnect blue and yellow wire plugs.

Separate the four wire connection between CD ignition module and trigger coil and attach four-wire plug adapter to wire plug from trigger coil as shown in Fig. P5-8. Attach red (P) lead from tester number 22 to red sleeved adapter wire marked "Trigger 1 Pos." and yellow (N) lead to yellow sleeved adapter wire marked "Trigger 1 Neg." Place switch of tester in number 1 position and crank engine. Trigger coil operation is satisfactory if tester lamp lights. Renew trigger housing if tester lamp does not light.

To check operation of number 2 cylinder trigger coil, repeat test procedure for number 1 cylinder trigger coil but connect red (P) lead of tester to red sleeved adapter wire marked "Trigger 2 Pos." and yellow (N) lead to yellow sleeved adapter wire marked "Trigger 2 Neg."

To check ignition module performance for each cylinder, connect yellow (N) lead from tester T8953 to ground terminal of engine terminal block (Fig. P5-9). Disconnect white (number 2 cylinder) or brown (number 1 cylinder) primary lead from ignition coil and connect red (P) lead of tester T8953 to primary lead. Connect leads of tester T8953 lead coil to ground terminal of engine terminal block and primary coil lead of cylinder being tested. Turn T8953 tester dial to number 50. Crank engine and tester lamp should light. Renew ignition module if lamp does not light.

COOLING SYSTEM

WATER PUMP. All motors are equipped with a rubber impeller type water pump. When cooling system problems are encountered, first check the water inlet for plugging or partial stoppage. Then if not corrected, remove the lower unit gearcase and check the condition of water pump, water passages and sealing surfaces.

Access to the water pump is possible after separating lower unit from motor leg. Remove motor leg covers. Uncover fasteners securing drive shaft housing to motor leg and disconnect interconnecting shaft and remove low unit (LUB) and
