Anaphora Resolution Ruslan Mitkov, 2014-02-24 Teaching computers to solve language problems is one of the major challenges of natural language processing. There is a large amount of interesting research devoted to this field. This book fills an existing gap in the literature with an up to date survey of the field including the author's own contributions. A number of different fields overlap in anaphora resolution: computational linguistics, natural language processing, NLP, grammar, semantics, pragmatics, discourse analysis, and artificial intelligence. This book begins by introducing basic notions and terminology, moving onto early research methods and approaches, recent developments and applications, and future directions. It addresses various issues related to the practical implementation of anaphora systems, such as rules employed, algorithms implemented, or evaluation techniques used. This is an ideal reference book for students and researchers in this particular area of computational linguistics. Since anaphora resolution is vital for the development of any practical NLP system, the book will be of interest to readers from both academia and industry.

Recent Advances in Natural Language Processing II Nicolas Nicolov, Ruslan Mitkov, 2000. This volume brings together revised versions of a selection of papers presented at the Second International Conference on Recent Advances in Natural Language Processing (RANLP 97) held in Tzigrich, Bulgaria, September 1997. The aim of the conference was to give researchers the opportunity to present new results in Natural Language Processing (NLP) based both on traditional and modern theories and approaches. The conference received substantial interest: 167 submissions from more than 20 countries. The best papers from the proceedings were selected for this volume in the hope that they reflect the most significant and promising trends and successful results in NLP. The contributions have been grouped according to the following topics: tagging, lexical issues, and parsing; word sense disambiguation; and anaphora resolution, semantics, generation, machine translation, and categorisation and applications. The volume contains an extensive index.
