Persistent Forecasting of Disruptive Technologiesâ¬"Report 2 National Research

Council, Division on Engineering and Physical Sciences, Committee on Forecasting Future Disruptive Technologies, 2010-07-02

The term disruptive technology describes a technology that results in a sudden change affecting already established technologies or markets. Disruptive technologies cause one or more discontinuities in the normal evolutionary life cycle of technology. This may lead to an unexpected destabilization of an older technology order and an opportunity for new competitors to displace incumbents. Frequently cited examples include digital photography and desktop publishing. The first report of the series *Persistent Forecasting of Disruptive Technologies* discussed how technology forecasts were historically made, assessed various existing forecasting systems, and identified desirable attributes of a next generation persistent long term forecasting system for disruptive technologies. This second book attempts to sketch out high level forecasting system designs. In addition, the book provides further evaluation of the system attributes defined in the first report and evidence of the feasibility of creating a system with those attributes. Together, the reports are intended to help the Department of Defense and the intelligence community identify and develop a forecasting system that will assist in detecting and tracking global technology trends, producing persistent long term forecasts of disruptive technologies, and characterizing their potential impact on future U.S. warfighting and homeland defense capabilities. *Sound for Moving Pictures* Neil Hillman, 2021-04-25

*Sound for Moving Pictures* presents a new and original sound design theory called the Four Sound Areas framework, offering a conceptual template for constructing, deconstructing, and communicating all types of motion picture soundtracks and a way for academics and practitioners to better understand and utilize the deeper emotive capabilities available to all filmmakers through the thoughtful use of sound design. The Four Sound Areas framework presents a novel approach to sound design that enables the reader to more fully appreciate audience emotions and audience engagement and provides a flexible practical model that will allow professionals to more easily create and communicate soundtracks with greater emotional significance and meaning. Of obvious benefit to sound specialists as well as motion picture professionals such as film producers, directors, and picture editors, *Sound for Moving Pictures* also provides valuable insight for others interested in the subject, such as those involved with teaching soundtrack analysis or those researching the wider topics of film studies and screen writing.
