Chapter 1

Trade in a Model with no Frictions

Exercise 1.1 (a) Equation 1.1 (Total amount of the consumption good in) $_t = N_t y_1 + N_{t-1} y_2$

- Equation 1.2 (Total consumption by the young) $_t = N_t c_{1t}$
- Equation 1.3 (Total consumption by the old) $_t = N_{t-1} c_{2t}$
- Equation 1.4 Feasibility constraint:

$$N_t c_{1t} + N_{t-1} c_{2t} \leq N_t y_1 + N_{t-1} y_2$$

With a constant population, we have,

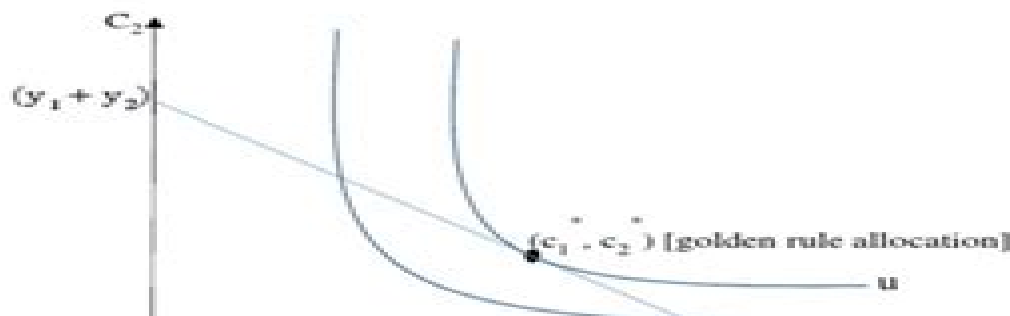

$$N c_{1t} + N c_{2t} \leq N y_1 + N y_2$$

Dividing throughout by N , we have

- Equation 1.5 $c_{1t} + c_{2t} \leq y_1 + y_2$
- Equation 1.6 Assuming a stationary allocation, the per capita constraint becomes

$$c_1 + c_2 \leq y_1 + y_2$$

(b) $(c_1, c_2) \rightarrow$ Golden Rule Allocation: allocation that maximizes the utility of future generations.

Modeling Monetary Economies Solutions:

Modeling Monetary Economies Bruce Champ, Scott Freeman, 2001-01-15 This upper level undergraduate textbook now in its second edition approaches monetary economics using the classical paradigm of rational agents in a market setting Too often monetary economics has been taught as a collection of facts about existing institutions for students to memorize By teaching from first principles the authors aim to instruct students not only in existing monetary policies and institutions but also in what policies and institutions may or should exist in the future The text builds on a simple clear monetary model and applies this framework consistently to a wide variety of monetary questions The authors have added in this second edition new material on speculative attacks on currencies social security currency boards central banking alternatives the payments system and the Lucas model of price surprises Discussions of many topics have been extended presentations of data greatly expanded and new exercises added

Ownership of Capital in Monetary Economies and the Inflation Tax on Equity Mr. Ralph Chami, Mr. Thomas F. Cosimano, Connel Fullenkamp, 1999-12-01 Financial instruments are subject to inflation taxes on the wealth they represent and on the nominal income flows they provide This paper explicitly introduces financial instruments into the standard stochastic growth model with money and production and shows that the value of the firm in this case is equal to the firm's capital stock divided by inflation The resulting asset pricing conditions indicate that the effect of inflation on asset returns differs from the effects found in other papers by the addition of a significant wealth tax

Christodoulakis, 2014-06-28 The Symposium aimed at analysing and solving the various problems of representation and analysis of decision making in economic systems starting from the level of the individual firm and ending up with the complexities of international policy coordination The papers are grouped into subject areas such as game theory control methods international policy coordination and the applications of artificial intelligence and experts systems as a framework in economic modelling and control The Symposium therefore provides a wide range of important information for those involved or interested in the planning of company and national economics
