

# RESEARCH PROPOSAL TEMPLATE

When preparing an application for entry into a research higher degree program it is necessary to supply a clear statement describing the proposed area of research (a research proposal). Consultation with a faculty or school academic staff member in the research area of interest is recommended prior to submission of an application. Liaising with an academic allows you to frame the proposal to align with established disciplines and areas of supervisor capacity.

You must write your own research proposal and reference accordingly. The exception is when your potential supervisor finalises the research proposal with you, for a specific research project that has already been defined. Please visit the University's Academic Integrity pages and policy

**Research Project Success** Cliodhna McCormac, James Davis, Pagona Papakonstantinou, Neil I Ward, 2015-10-20 The undergraduate research project is almost universally treated as the culmination of all previous lecture lab and tutorial work The project allows for the development of individuality and confers ownership of a challenge possessing an originality that goes far beyond the communal legacy presented by age old lab scenarios Central to this is the magical transition of the student from a consumer of knowledge to a producer yet the journey is often both daunting and perplexing when considering where to start and how to reach the destination using the resources provided and in the allotted time There are numerous books within the social sciences which provide students with guidance on how to conduct a successful project but few can be found in relation to the physical sciences This can be ascribed to the fact that the former has a very similar structure and procedural methodology whereas the latter can possess a near fractal differentiation into a myriad of sub disciplines and specialisms thereby preventing the provision of a single expansive catchall text This book adapts some of the components and ethos of the Projects in Controlled Environments PRinCE2 project management approach to physical science projects This is the industry and government standard and was introduced to address the common causes of project failure ie not delivering projects on time within budget within scope or to the right quality It has rapidly emerged as an international standard and most graduates will doubtless encounter it upon moving outside academia and into the wider world It is a concise multilevel resource that provides guidance on the core components common to almost every project within the physical engineering and life sciences problem assessment and contextualisation literature review practices sources and citation data presentation reporting styles data analysis and error

etc It standardises the delivery of the material but more importantly links the components together by outlining a coherent procedural road map that can highlight to the student what to do when to do it and how to solve it procedures The content of the book is presented through case studies so as to enhance the relevance of the processes presents examples of good practice and in keeping with the toolbox approach can be readily adapted and applied by the students The book is an accessible reference guide for students written in a light style suitable for dipping in and out of as required and the how to when to what if examples are presented in an often humorous light It includes flow charts to emphasize the project planning dissertation components etc and charts to highlight presentation of data analysis interpretation and error
