

## LABORATORY 5

# Mendelian Genetics

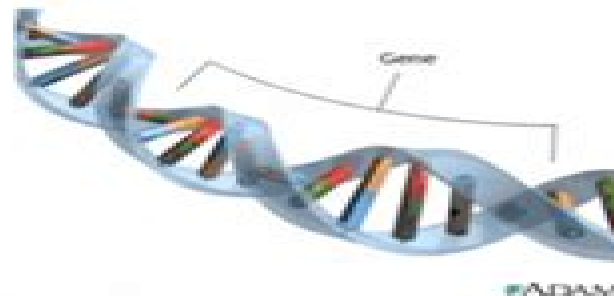

Despite what you may have heard, you're *not* what you eat. Rather, you are a product of the genetic code you inherited from your parents, and its interactions with the environment. The study of inheritance—at the molecular, organismal, and evolutionary levels—comprises the field of **Genetics**.

By now you should be familiar with the work of **Gregor Mendel**, the Austrian abbot sometimes known as the "Father of Modern Genetics". If you have not already done so, be sure to read the pertinent sections in your textbook on Mendel and his discoveries about inheritance.

In today's lab, you will examine genetic data from several organisms, including yourself. You will also be responsible for completing the genetics problems at the end of the exercise, and turning them in to your laboratory instructor.

### I. The Terminology of Genetics

Mendel had no idea that inside the nucleus of each eukaryotic cell, units of inheritance (genes) consist of lengths of DNA wrapped around protein "spools" and neatly spiraled to form **chromosomes**. Each chromosome is, in essence, a long strand of genes. Before we go any further, let's review the terminology of modern genetics.

**Figure 1.** A short strand of DNA. The translucent bars on either side are the sugar-phosphate "backbone" of the molecule. The "rungs" of the twisted "ladder" are the nucleotide bases. Each "rung" is formed by either (T) hydrogen-bonded to adenine (A) or guanine (G) hydrogen-bonded to cytosine (C).

#### A. Vocabulary

**gene** - a section of DNA that (usually) encodes the structure of a **protein** (= **polypeptide**).

**genome** - the full complement of ONE COPY of all the genes in a given organism.

- **diploid** cells have two complete copies of the genome (example: somatic (body) cells). In a diploid organism, one copy of the genome comes from each parent.
- **haploid** cells have one copy of the genome (example: germ cells, such as sperm or ovum)

**genotype** - the genetic makeup of an organism for a particular trait

**phenotype** - the physical appearance/makeup of a trait
