The over-harvesting of traditional indigenous medicinal plants contributes to the decline of biodiversity in South Africa.

The African potato (*Hypoxis hemerocallidea*) is a natural resource that is widely used as a traditional medicine in South Africa. The use of the plant escalated at the onset of the HIV/AIDS pandemic because it was popularly believed that it cures AIDS. Extensive medical research has shown that it is not a cure for AIDS, although it may have other medicinal properties.

Field research, on the role of which it is harvested, was done in KwaZulu Natal. The results show that more than 40 000 roots are widely harvested every year.

Rury, 2023-10-13 An Age of Accountability highlights the role of test based accountability as a policy framework in American education from 1970 to 2020 For more than half a century the quest to hold schools and educators accountable for academic achievement has relied almost exclusively on standardized assessment The theory of change embedded in almost all test based accountability programs held that assessment with stipulated consequences could lead to major improvements in schools This was accomplished politically by proclaiming lofty goals of attaining universal proficiency and closing achievement gaps which repeatedly failed to materialize But even after very clear disappointments no other policy framework has emerged to challenge its hegemony The American public today has little confidence in institutions to improve the quality of goods and services they provide especially in the public sector As a consequence many Americans continue to believe that accountability remains a vital necessity even if educators and policy scholars disagree **Comprehensive Guide to CDS**
