Management Rachel McClean,2010 The Capacity to Innovate Sarah Giest,2021-04-07 In The Capacity to Innovate Sarah Giest provides insight into the collaborative and absorptive capacities needed to provide public support to local innovation through cluster organizations The book offers a detailed view of the vertical multi level and horizontal dynamics in clusters and cluster policy and addresses how they are managed and supported Using the biotechnology field as an example Giest highlights challenges in the collaborative efforts of public bodies private companies and research institutes to establish a successful ecosystem of innovation in this sector The book argues that cluster policy in collaboration with cluster organizations should focus on absorptive and collaborative capacity elements missing in the cluster context in order to improve performance Currently governments operate at different levels from the local to the supranational in order to support clusters and cluster policies are often pursued alongside other programs leading to uncoordinated efforts and ineffective cluster strategies The Capacity to Innovate advocates for a coordinated effort by government and cluster organizations to support capacity elements lacking within the specific cluster context Scrambling for Africa Johanna Tayloe Crane,2013-09-15 Countries in sub Saharan Africa were once dismissed by Western experts as being too poor and chaotic to benefit from the antiretroviral drugs that transformed the AIDS epidemic in the United States and Europe Today however the region is courted by some of the most prestigious research universities in the world as they search for resource poor hospitals in which to base their international HIV research and global health programs In Scrambling for Africa Johanna Tayloe Crane reveals how in the space of merely a decade Africa went from being a continent largely excluded from advancements in HIV medicine to an area of central concern and knowledge production within the increasingly popular field of global health science Drawing on research conducted in the U S and Uganda during the mid 2000s Crane provides a fascinating ethnographic account of the transnational flow of knowledge politics and research money as well as blood samples viruses and drugs She takes readers to underfunded Ugandan HIV clinics as well as to laboratories and conference rooms in wealthy American cities like San Francisco and Seattle where American and Ugandan experts struggle to forge shared knowledge about the AIDS epidemic The resulting uncomfortable mix of preventable suffering humanitarian sentiment and scientific ambition shows how global health research partnerships may paradoxically benefit from the very inequalities they aspire to redress A work of outstanding interdisciplinary scholarship Scrambling for Africa will be of interest to audiences in anthropology science and technology studies African studies and the medical humanities *From Stars to Brains: Milestones in the Planetary Evolution of Life and Intelligence* Andrew Y. Glikson,2019-02-18 The permutation of basic atoms nitrogen hydrogen oxygen carbon and phosphorus into the biomolecules DNA and RNA subsequently evolved in cells and brains defining the origin of life and intelligence remains unexplained Equally the origin of the genetic information and the intertwined nature of hardware and software involved in the evolution of bio molecules and the cells are shrouded in mystery This treatise aims at exploring individual and swarm behaviour patterns which potentially hint at as yet

unknown biological principles It reviews theories of evolution with perspectives from the earth sciences commencing with the earliest observed records of life This is followed by reviews and discussion of the building blocks of life marine and terrestrial communities the arthropods birds and finally humans It is suggested that further to the mutation natural selection processes established by Darwin and Wallace an understanding of the evolution of intelligence remains little understood A directionality of evolutionary trajectories is evident not least the purposeful thinking process of humans as well as animals It is not clear how directional intelligence manifested for example by the collective intelligence of arthropod colonies has evolved from mutation natural selection processes Potential clues for the understanding of life and evolution are provided by Aristotle s dictum of the whole being greater than the sum of the parts Niels Bohr s principle of quantum complementarity and George Ellis theory of top down causality Inherent in the question of the origin of life is an anthropocentric bias related to the self referential Anthropic Principle and theological paradigms of man s supposed dominion over all other species The Anthropic Principle however should be capable of being circumvented using the scientific falsification method assuming universal verified constants of physics The phenomenon of the human mastery of fire and the splitting of the atom leading to the seventh major mass extinction of species remains incomprehensible
