MODEL W801, 802 & 812 AUTOMATIC RECORD PLAYERS

GENERAL

These Record Players utilize an 11-inch turntable and a 4-pole, synchronous drive motor. The W812 employs a short control post and the W801 employs a tall control post. The W802 employs a lighted (22) tall control post. These record players are designed for use with 7", 10", or 12" records at speeds of 16 2/3, 33 1/3, 45, or 78 R.P.M.

Change Cycle

The changer employs a "Velocity Trip" mechanism which initiates the change cycle when the Tone Arm undergoes increased inward acceleration. This takes place after the stylus enters the lead-out groove at the end of the record.

As the Tone Arm tracks the record, a post attached to the Vertical Pivot Bracket Assembly (106) pushes against the Striker Slide (88-3). The Striker Slide is fed inward, makes contact with the Striker Friction Plate (62-4), and moves the Striker (62-3) toward the Turntable Hub. The velocity of the Tone Arm, during normal tracking, is not sufficient to trip the mechanism because the wiping action of the hub projection moves the Striker back with each revolution of the turntable.

However, when the stylus enters the lead-out groove at the end of the record, the velocity of the Striker Slide is sufficient to cause the Striker to move in ahead of the turntable hub projection. The projection then engages the Striker and pushes it far enough to move the Intermediate Gear (62-5) out of the recess in the periphery of the Main Cam Gear (64). This meshes the Intermediate Gear with both the Turntable Gear and the Main Cam Gear and initiates the change cycle. Failure of this automatic trip mechanism may be due to the presence of contaminants on the Striker

and Striker Friction Plate (Refer to Servicing the Intermediate Gear & Striker Assembly).

As the Main Cam Gear starts its change cycle rotation, it actuates the Muting Switch Slider (32), which in turn causes the Muting Switch Contact to ground the pickup output.

While the Main Cam Gear rotates, the roller on the Tone Arm Lift Lever (103) rides on a series of elevations on the Main Cam Gear, which cause the Lift Lever to pivot. This moves the Tone Arm Lift Rod (38) and controls the vertical travel of the Tone Arm.

As the Main Cam Gear continues to rotate, the Tone Arm sizes the next record. The Cam-Follower Pin on the Feed Lever (109) moves laterally with the Tone Arm to one of three grooves in the Main Cam Gear. The selected groove determines the Tone Arm set-down position.

As the Main Cam Gear rotates, the roller located atop the Record Dropping Slide (66) contacts a cam lobe and is pushed outward, away from the center of the cam. This causes lateral movement of the pawl within the Record Dropping Spindle (15) which pushes the bottom record off of the spindle shelf and drops it into the turntable. As the Record Dropping Slide retracts, the Pawl Lift Spring pushes the pawl upward and into position for the following record.

At the end of the change cycle the Intermediate Gear drops into a recess of the Main Cam Gear and disengages from the Turntable Gear. As this occurs the Muting Switch Contact opens and the Cam-Follower Pin moves out of the cam groove and into the "play recess" area of the Main Cam Gear.
