 how to observe our own Earth planet Great amount of remote sensing data and images presents new resources to  
 quantitatively describe and monitor our Earth environment atmosphere oceanic and land surfaces In remote sensing  
 electromagnetic EM scattering emission and wave propagation as interaction with the Earth environment lay the physical  
 basis for understanding and extracting geoscientific information Study of electromagnetic waves with remote sensing  
 application has become an active and interdisciplinary area This book presents some new progress on the theoretical and  
 numerical approaches for information retrieval of the remote sensing via EM scattering and emission We begin in Chapter 1  
 with the vector radiative transfer VRT theory for inhomogeneous scatter media The VRT takes account of multiple scattering  
 emission and propagation of random scatter media and quantitatively leads to insights of elucidating and understanding EM  
 wave terrain surface interaction Meanwhile it is extensively applicable to carrying out data interpretation and validation and  
 to solving the inverse problem e g iteratively physically or statistically In Chapter 1 iterative solutions of multiple scattering  
 and emission from inhomogeneous dense scatter media and inhomogeneous non spherical scatter media are discussed Three  
 dimensional VRT equation 3D VRT for spatially inhomogeneous random scatter media for high resolution observation is also  
 investigated The polarimetric imagery of synthetic aperture radar SAR technology is one of most important advances in  
 space borne microwave remote sensing during recent decades      **Solution of Problems in Advanced Electrical
