systematic steps Laboratory Manual for Electronics via Waveform Analysis Edwin C. Craig, 2012-12-06 To the Instructor
The purpose of this laboratory manual is not just to help students to set up electronic circuits that function as they should
The important thing is the electronic concepts that the student learns in the process of setting up and studying these circuits
Quite often a student learns more electronics when he has to trouble shoot a circuit than when the circuit performs as it
should when first built It is unlikely that any students would be able to complete all of these experiments in one semester The
author believes that all students should have laboratory experiences with power supplies amplifiers oscillators and
integrated circuits Additional laboratory experiments should be determined by the instructor Therefore you can choose those
that you want done Some students are more efficient in the laboratory than others Therefore some would be able to complete
more experiments in a semester than others Also many of these experiments cannot be completed in one two hour laboratory
period If space is available the circuits could be left intact from one period to the next Or you might want to select steps in an
experiment that you want to delete Neither the values of the components or the magnitudes of the power supplies as given
in the instructions are critical Therefore you could in most cases change them if the ones recommended are not available
