Kari Tomato Farming Guide:

City Farming: A How-to Guide to Growing Crops and Raising Livestock in Urban Spaces Kari Spencer, 2017-11-07

Farming in cities and small spaces is becoming increasingly popular but it has its challenges. City Farming addresses the problems the urban farmer might face and turns them into creative solutions. It assists the new grower to gain expert understanding of how to create a production urban farm as well as helping established farmers to troubleshoot and discover new ways to bring their space into greater harmony and production. From the perspective of a holistic gardener, growing plants and raising livestock are covered as well as integrated approaches which bring together the whole farming system in a small space to produce high yields with minimal energy and effort. The content is organised by themes of importance to urban farmers: sun and heat, water usage, seasonal production, spatial planning, soil quality and usage, propagation and breeding, pests and diseases, farming under time constraints, sustainability and community initiatives. These are all discussed within the context of urban farming and include common issues and strategies like microclimates in built up areas, natural and organic approaches, water harvesting, toxic land, roof gardening, converting ornamental gardens to productive edible gardens, municipal regulations, vertical gardening, aquaponics, composting methods, livestock suitability in limited space, Community Supported Agriculture, CSA schemes, permaculture in small spaces, community gardens and trade barter schemes. Each chapter unfolds a piece of the story of The Micro Farm Project that provides an overview of the theme and then discusses the crop and livestock considerations relating to the theme of the chapter in the form of the challenges they present and practical solutions to the problems such as lack of space, high population density, poor soil quality, planning restrictions etc. Case studies giving examples of different methods used within urban farming from different regions throughout the world are included. City Farming is a beautifully illustrated source that can be valuable to both beginners and more experienced urban farmers.

5m Books **Farmers' Guide**, 1898 Unlocking the potential of protected agriculture in the countries of the Gulf Cooperation Council - Saving water and improving nutrition Food and Agriculture Organization of the United Nations, 2021-04-22

The Gulf Cooperation Council (GCC) is a political and economic union of Arab states, namely Bahrain, Kuwait, Oman, Qatar, Saudi Arabia and the United Arab Emirates. The GCC was formed in 1981 to strengthen the members' economic, social and political ties by harmonizing regulations in various fields including economy, finance, trade and customs. The region extends over a territory of 2 673 108 km² and is home to about 50 million people. The common denominators of the GCC countries are limited natural fertile land, scarce water resources and harsh climate. Depending on the country, the agriculture sector may use as much as 75 percent of the national available water resources. This has enormous environmental costs and significantly affects the sustainability of overall development in the Arabian Peninsula. According to Al Rashed and Sherif (2000), the lack of renewable water resources is one of the critical constraints to sustainable development in the GCC countries. Rainfall in the Arabian Peninsula is scarce and infrequent. Over exploitation of fossil groundwater resources, mostly

to meet irrigation demands and create greenery lands has already affected the productivity of aquifers both quantitatively and qualitatively despite the fact that much of the freshwater demand in the GCC countries is already covered using desalinated water. Reducing water consumption and increasing water efficiency are essential to enhancing agriculture and moving towards increased self sufficiency with the production of high quality safe and diversified foods in the GCC countries. Exploiting the full potential of protected agriculture should save significant amounts of water which can be used not only for agriculture but for other needs as well.
