alcohol and nicotine are still discussed in the book's section on environmental and social pharmacology. Focusing as before on detailed explanation and incorporating both pharmacokinetic and pharmacodynamic drug interactions, this book will continue to be a lodestar for health and forensic professionals as well as students.

Prostanoids P. K. Moore, 1985-12-12 Prostanoids are a group of fat-soluble compounds synthesised by almost every cell in the human body and they are essential to the proper functioning of the organs. Interruption to the constant rate of formation and release of prostanoids may cause life-threatening conditions to develop; for example, a deficiency may exacerbate or cause strokes, heart disease, diabetes, and an excess is implicated in arthritis. The interest in the structure and functions of prostanoids is great, and much research effort has been spent on elucidating facts about them. This book makes explicit the present knowledge on the subject and emphasises the pharmacology, physiology, and relevance to clinical conditions. It offers those studying pharmacology and physiology, particularly in preclinical medical courses, an up-to-date summary of this exciting group of substances.

Forbidden Drugs Philip Robson, 2009-07-16 Forbidden Drugs addresses the fascinating and contentious subject of recreational drug use with a unique combination of authoritative scientific information and entertaining readability. Pharmacology of Neuromuscular Function William C. Bowman, 2013-10-22 Pharmacology of Neuromuscular Function, Second Edition, provides information pertinent to drugs that affect membrane potentials of the conduction of action potentials in nerve endings and muscle fibers. This book reviews in a general way some of the properties of excitable membranes. Organized into seven chapters, this edition begins with an overview of innervation of striated muscles by somatic efferent nerve fibers. This text then explains the transmission from nerve to muscle, which is mediated by acetylcholine that is synthesized and stored in the axon terminals. Other chapters consider the different steps in the transmission process that occur in the nerve endings, which may be modified by the actions of drugs and toxins. This book discusses as well the primary action of neuromuscular blocking agents. The final chapter deals with the cytoplasm of a muscle cell or fiber that contains all the usual subcellular organelles, including mitochondria and nuclei. This book is a valuable resource for pharmacologists and anesthetists.
