Highrise Construction Manual:

High-rise Manual Johann Eisele, Ellen Kloft, 2003 What constitutes a high rise building A high rise is in fact any building with more than 9 storeys and not just those striking skyscrapers which shape modern city skylines In the past architects who designed such structures used to be the exception but in the last 10 years more and more architectural offices have begun to focus on this type of building However the sheer complexity of designing and planning the construction of a high rise as opposed to other building types requires a wealth of specialized experience and expertise The High Rise Manual is the first comprehensive reference work on this subject All relevant aspects of such an undertaking are examined in detail by some 24 specialist authors Each step is extensively documented including the initial project planning the building organisation the laying of the foundations the supporting structure the building technology the office design and the Facility Management Theoretical contributions present the basic principles of select **Sustainable Building - Design Manual**, 2004-01-01 The second volume targets practitioners and focuses on the process of green architecture by combining concepts and technologies with best practices for each integral design component Skyscraper Manual Builders' Workshop Manual Alexandra Wynne, Dave Parker, 2020-05-12 It's hard to believe that the world's first skyscraper was built in 1885 the ten storey Home Insurance Building in Chicago Little more than a century later the highest skyscraper is the 163 storey Burj Khalifa in Dubai standing 828 metres tall By 2020 the 1 000 metre Kingdom Tower in Jeddah will take first place The designs are becoming more extraordinary but behind all the steel and glass how is a skyscraper logistically constructed The Haynes Skyscraper Manual takes the reader be they armchair enthusiast or architect through the fascinating process from initial concepts through to modern day building methods Interspersed with intriguing facts and figures the Skyscraper Manual is fully illustrated with stunning photographs and technical drawings **High-Rise Security and Fire Life Safety** Geoff Craighead, 2009-06-15 High Rise Security and Fire Life Safety 3e is a comprehensive reference for managing security and fire life safety operations within high rise buildings It spells out the unique characteristics of skyscrapers from a security and fire life safety perspective details the type of security and life safety systems commonly found in them outlines how to conduct risk assessments and explains security policies and procedures designed to protect life and property Craighead also provides guidelines for managing security and life safety functions including the development of response plans for building emergencies This latest edition clearly separates out the different types of skyscrapers from office buildings to hotels to condominiums to mixed use buildings and explains how different patterns of use and types of tenancy impact building security and life safety Differentiates security and fire life safety issues specific to Office towers Hotels Residential and apartment buildings Mixed use buildings Updated fire and life safety standards and guidelines Includes a CD ROM with electronic versions of sample survey checklists a sample building emergency management plan and other security and fire life safety resources **Tall: the design and construction of high-rise architecture** Guy Marriage, 2019-09-10 This is a

guide to both the basics and the details of tall building design delving into the rudimentary aspects of design that an architect of a tall office building must consider as well as looking at the rationale for why and how a building must be built the way it is. Liberally illustrated with clear simple black and white illustrations showing how the building structure and details can be built this book greatly assists the reader in their understanding of the building process for a modern office tower. It breaks down the building into three main components: the structure, the core, and the facade, writing about them and illustrating them in a simple to understand manner. By focusing on the nuts and bolts of real life design and construction it provides a practical guide and desk reference to any architect or architecture student embarking on a tall building project.

Refurbishment Manual Georg Giebeler, Harald Krause, Rainer Fisch, Florian Musso, Bernhard Lenz, Alexander Rudolphi, 2012-12-10. Planning tasks involving existing structures are currently among the most common types of contract and almost every structure makes different demands and raises individual problems. Reflecting this state of affairs there are a dizzying number of publications on the market most of which are quite specialized. The Refurbishment Manual cuts through this jungle of publications. It defines terms and concepts, combines the narrowly focused perspectives of the specialists and offers concrete approaches to this wide ranging topic. The Refurbishment Manual closes the gap between basic constructional literature and one sided highly specialized technical literature. It constitutes a practical planning aid on the subject of refurbishment providing a basic introduction to the relevant aspects of building physics, fire protection, sustainability and energy, hazardous materials, construction materials for interior and facade, historic preservation and technical building equipment. It offers concrete tips on planning steps, methods of building analysis and cost benchmarks as well as clear constructional solutions with built projects as examples. A unique feature of the volume is the specially developed timeline which allows the planner to quickly grasp, categorize and evaluate a concrete building task and thus obtain an efficient planning overview. Planungsarbeiten im Bestand gehen derzeit zu den häufigsten Auftragsarten und nahezu jedes Bauwerk stellt andere Anforderungen und weist individuelle Probleme auf. Analog dazu gibt es auf dem Markt eine fast unüberschaubare Anzahl Publikationen in meist sehr spezialisierter Form. Der Sanierungsatlas möchte Licht in diesen Publikationsdschungel bringen. Er definiert Begrifflichkeiten, vereint die fokussierenden Betrachtungsweisen der Fachleute und vermittelt konkrete Herangehensweisen an diese weit gefächerte Thematik. Der Sanierungsatlas schließt die Lücke zwischen grundlegender Baukonstruktion und sehr einseitig spezialisierter Fachliteratur. Das Buch stellt eine praktische Planungshilfe zum Thema Sanierung dar und zwar in Form von relevanter Grundlagenvermittlung zu Bauphysik, Brandschutz, Nachhaltigkeit und energetischen Aspekten, Schadstoffen, Baustoffen im Innenraum und an der Fassade, zu Aspekten der Denkmalpflege ebenso wie zur technischen Gebäudeausstattung. Er liefert konkrete Hinweise zu Planungsschritten, Methoden der Bauanalyse und Kostenkennwerten sowie anschauliche Konstruktionslösungen am Beispiel gebauter Projekte. Einzigartig ist die speziell entwickelte Zeitschiene mit deren Hilfe eine konkrete Bauaufgabe schnell erfasst, kategorisiert und bewertet

werden kann und die dem Planer somit einen effizienten Planungsberblick verschafft

Design of Modern Highrise Reinforced Concrete Structures Hiroyuki Aoyama, 2001 This book presents the results of a Japanese national research project carried out in 1988-1993 usually referred to as the New RC Project. Developing advanced reinforced concrete building structures with high strength and high quality materials under its auspices, the project aimed at promoting construction of highrise reinforced concrete buildings in highly seismic areas such as Japan. The project covered all the aspects of reinforced concrete structures: namely materials, structural elements, structural design, construction, and feasibility studies. In addition to presenting these results, the book includes two chapters giving an elementary explanation of modern analytical techniques: i.e. finite element analysis and earthquake response analysis.

Brannigan's Building Construction for the Fire Service Francis Brannigan, Glenn Corbett, 2009-04-06 Brannigan's Building Construction for the Fire Service Fourth Edition is a must read for fire fighters, prospective fire fighters, and fire science students. This edition continues the Brannigan tradition of using plain language to describe technical information about different building types and their unique hazards. This text ensures that critical fire fighting information is easy to understand and gives valuable experience to fire fighters before stepping onto the fireground. The first edition of Building Construction for the Fire Service was published in 1971. Frank Brannigan was compelled to write the most comprehensive building construction text for the fire service so that he could save fire fighters' lives. His passion for detail and extensive practical experience helped him to develop the most popular text on the market. His motto of "Know your buildings" informs every aspect of this new edition of the text. Listen to a Podcast with Brannigan's Building Construction for the Fire Service Fourth Edition co-author Glenn Corbett to learn more about this training program.
