Development of integrated multipurpose animal recording systems Food and Agriculture Organization of the United Nations, 2018-08-21 Animal identification and recording serves multiple purposes in a country's livestock sector It is a prerequisite to establish and operate any genetic improvement programme It also contributes to animal traceability and disease control as well as to deterring stock theft Traceability of animals and their products helps to ensure the safety and quality of animal products and contributes to enhance market access and to generate larger incomes for producers and other players in the value chain Animal recording systems are therefore not just an information system but a powerful tool for livestock development and for contributing to global demands for food security and poverty alleviation To make animal recording systems effective they must be supported by appropriate public and private policies and a legal and institutional framework These multiple uses of animal identification and recording highlight the need to adopt multipurpose systems that integrate animal identification and registration animal traceability animal health information and performance recording The FAO guidelines for development of integrated multipurpose animal recording systems have been prepared with the objective of helping countries to design and implement such systems and to maximize the chances that they will be sustained These guidelines put performance recording in a more general context and hence to complement rather than replace the previous FAO guidelines These guidelines focus primarily upon the process rather than the methods and the technology e.g. details of the equipment and measurements since the latter is sufficiently covered by other guidelines Where necessary the guidelines are formulated to suit low or medium input production environments

Safety assurance during food processing Frans J.M. Smulders, John D. Collins, 2023-08-28 Microbial agents particularly bacteria represent the greatest risk to public health The traditional end product oriented food inspection systems are inadequate for identifying and eliminating the usually symptomless animal carriers of agents causing foodborne infections and intoxications Modern risk based prevention approaches are the only effective way to reduce the prevalence of these hazards from our foods As an additional safety valve microbial decontamination procedures are currently being suggested and its implementation in industrial food processing has at least in some parts of the world met with governmental approval The residues in foods of some non microbial agents have more recently also caused substantial consumer disquiet This equally applies to non conventional foods containing GMO's In this publication these issues are addressed by invited expert scientists from various disciplines many of which have key positions in EU funded research programmes on these very topics and/or are advisers to international public health bodies The editors firmly believe that the very nature of the theme the excellence of the papers

Proceedings of the AHEAD 2017 Workshop Flavie Vial, András Székács, Sinead Quealy, 2018-08-30 The Organisation for Economic Co operation and Development OECD s Co operative Research Programme on Biological Resource Management for Sustainable Agricultural Systems sponsored the AHEAD 2017 workshop bringing together experts from the farming and pharmaceutical industries information and communications technology policy research and more to create a roadmap to the digital transformation of animal health surveillance In many countries policy supports the reduction of antibiotic use and a growing focus in the veterinary practice is to move away from blanket dosage of antibiotics for example for mastitis Significant and speedy improvements can take place but only with coordinated actions supported by the entire value chain Reducing the use of antibiotics is of massive societal importance but changing on farm or veterinary methods requires thought and a user centred approach The most glaring and addressable challenge is the absence of near real time data and information AHEAD 2017 explored how governments globally can benefit from increased digitisation in animal health For

effective monitoring it is important to first understand the relevant tasks of each stakeholder in the food value chain. In these proceedings we openly discuss and define these tasks, identify existing challenges to completion of these tasks and suggest the business opportunities overcoming these challenges can create. Through this publication it is our intention to encourage open discussion, design and co-creation of an improved digital approach to animal health and drug usage in agriculture. The Workshop was sponsored by the OECD Co-operative Research Programme on Biological Resource Management for Sustainable Agricultural Systems, whose financial support made it possible for most of the invited speakers to participate in the Workshop. The opinions expressed and arguments employed in this publication are the sole responsibility of the authors and do not necessarily reflect those of the OECD or of the governments of its Member countries.

Food Safety Control in the Poultry Industry G.C. Mead, 2005-08-08. The safety of poultry meat and eggs continues to be a major concern for consumers. As a result, there has been a wealth of research on identifying and controlling hazards at all stages in the supply chain. Food safety control in the poultry industry summarises this research and its implications for all those involved in supplying and marketing poultry products. The book begins by analysing the main hazards affecting poultry meat and eggs, both biological and chemical. It then discusses methods for controlling these hazards at different stages, from the farm through slaughter and carcass processing operations to consumer handling of poultry products. Further chapters review established and emerging techniques for decontaminating eggs or processed carcasses, from physical methods to the use of bacteriophage and bacteriocins. With its distinguished editor and international team of contributors, Food safety control in the poultry industry is a standard reference for both academics and food companies. Reviews recent research on identifying and controlling hazards at all stages in the supply chain. Edited by a leading expert in this hot area, with contributions from a worldwide team of experts. Identify how to meet and exceed consumers' high expectations in food safety.

Food Safety in the 21st Century Puja Dudeja, Rajul K Gupta, Amarjeet Singh Minhas, 2016-09-28. Food Safety in the 21st Century: Public Health Perspective is an important reference for anyone currently working in the food industry or those entering the industry. It provides realistic, practical and very usable information about key aspects of food safety while also systematically approaching the matter of foodborne illness by addressing the intricacies of both prevention and control. This book discusses ways to assess risk and to employ epidemiological methods to improve food safety. In addition, it also describes the regulatory context that shapes food safety activities at the local, national and international levels and looks forward to the future of food safety. Provides the latest research and developments in the field of food safety. Incorporates practical, real-life examples for risk reduction. Includes specific aspects of food safety and the risks associated with each sector of the food chain, from food production to food processing and serving. Describes various ways in which epidemiologic principles are applied to meet the challenges of maintaining a safe food supply in India and how to reduce disease outbreaks. Presents practical examples of foodborne disease incidents and their root causes to highlight pitfalls in food safety management.
