Abstract: *Staphylococcus aureus* is a leading cause of nosocomial infection. The purpose of this study was to determine the prevalence of *S. aureus* in the hospital environment and to determine the effect of disinfectants on the survival of *S. aureus* on a commonly used surface. A total of 100 samples were collected from the hospital environment. The results showed that 60% of the samples were positive for *S. aureus*. The results also showed that 90% of the *S. aureus* isolates were susceptible to the disinfectants tested. The results of this study suggest that the use of disinfectants can reduce the prevalence of *S. aureus* in the hospital environment.
