**Systems-on-Chip** Ubar, Raimund,Raik, Jaan,Vierhaus, Heinrich Theodor,2010-12-31 This book covers aspects of system design and efficient modelling and also introduces various fault models and fault mechanisms associated with digital circuits integrated into System on Chip SoC Multi Processor System on Chip MPSoC or Network on Chip NoC     Exploring the Early Digital Thomas Haigh,2019-04-30 Changes in the present challenge us to reinterpret the past but historians have not yet come to grips with the convergence of computing media and communications technology Today these things are inextricably intertwined in technologies such as the smartphone and internet in convergent industries and in social practices Yet they remain three distinct historical subfields tilled by different groups of scholars using different tools We often call this conglomeration the digital recognizing its deep connection to the technology of digital computing Unfortunately interdisciplinary studies of digital practices digital methods or digital humanities have rarely been informed by deep engagement with the history of computing Contributors to this volume have come together to reexamine an apparently familiar era in the history of computing through new lenses exploring early digital computing and engineering practice as digital phenomena rather than as engines of mathematics and logic Most focus on the period 1945 to 1960 the era in which the first electronic digital computers were created and the computer industry began to develop Because digitality is first and foremost a way of reading objects and encoding information within them we are foregrounding topics that have until now

been viewed as peripheral in the history of computing betting odds calculators card file systems program and data storage programmable calculators and digital circuit design practices Reconceptualizing the history of computing as study of the early digital decenters the stored program computer repositioning it as one of many digital technologies *1999 4th International Conference on Telecommunications in Modern Satellite, Cable and Broadcasting Services - Telsiks*, 1999 Aimed at personal communication engineers the subjects covered in these proceedings include satellite communication systems cable communication systems radio communication systems mobile communication systems satellite and terrestrial broadcast systems and television techniques **Scientific and Technical Aerospace Reports**, 1994 *Digital Filters* Fred Taylor, 2011-09-20 The book is not an exposition on digital signal processing DSP but rather a treatise on digital filters The material and coverage is comprehensive presented in a consistent that first develops topics and subtopics in terms of their purpose relationship to other core ideas theoretical and conceptual framework and finally instruction in the implementation of digital filter devices Each major study is supported by Matlab enabled activities and examples with each Chapter culminating in a comprehensive design case study **Great Lakes 4th Symposium on VLSI IEEE**, 1994 The proceedings of GSLV 94 held at the U of Notre Dame South Bend Indiana in March 1994 comprise technical papers in sessions on high level synthesis and verification systolic arrays fault tolerance theoretical results in routing logic synthesis MCM high performance architectures application specific design routing algorithms circuit *Modern Programmable Interconnect Design* Stefan Nikolić, 2025-03-06 This book thoroughly analyzes the fundamental problem of programmable interconnect design in FPGAs Recent changes in fabrication technology have caused a renewed interest in this problem that was formerly considered largely solved Besides presenting some of the most recent research results directed towards resolving the difficulties of programmable interconnect design in scaled technologies the author also gives a modern introduction to programmable interconnect design in general covering related topics such as broader FPGA architecture CAD and Networks on Chip enabling practitioners from other fields to understand the significance and implications of this important problem **Books in Print Supplement**, 2002 **Mathematical Modelling and Simulation of Electrical Circuits and Semiconductor Devices** Randolph Bank, R. Bulirsch, H. Gajewski, K. Merten, 2012-12-06 Progress in today's high technology industries is strongly associated with the development of new mathematical tools A typical illustration of this partnership is the mathematical modelling and numerical simulation of electric circuits and semiconductor devices At the second Oberwolfach conference devoted to this important and timely field scientists from around the world mainly applied mathematicians and electrical engineers from industry and universities presented their new results Their contributions forming the body of this work cover electric circuit simulation device simulation and process simulation Discussions on experiences with standard software packages and improvements of such packages are included In the semiconductor area special lectures were given on new modelling approaches numerical techniques and existence and uniqueness results In this
