# Addressable Fire Alarm Control Panels

## Monaco Analog Addressable+ (MAAP(+)) FACP with Integrated Radio Transceiver

### Features

- Combines the Narrowband Radio Transceiver and Addressable (and/or conventional) Fire Alarm Control Panel in one modular, compact unit: no interconnection wiring or interfacing needed
- Monaco Analog Addressable Panel (MAAP(+)) with Point Reporting capability individually reports every addressable sensor or addressable monitor module to a D-31 Central Receiving System.
  - Heat or Smoke Detector status (Alarm Trouble)
  - Monitor module status (Alarm Trouble)
- Combines Monaco original zone reporting with point reported status
  - Fast response using well established protocol for zone information
  - Point Reporting of sensor and monitor modules to the central receiving system for detailed real-time alarm and trouble status which can be graphically displayed at the D-31 Central in dispatch or on scene using the D-31 Mobile Client system
- Enhanced diagnostic information
  - Panel troubles and loop faults uniquely identified
  - Control Module and NAC module faults reported
- Supports traditional grouping of multiple devices to a common zone number for transmission to a D-700 or D-31 (FSK) Central Receiving System
- Now supports a combined zone and point reporting feature to D-31 Central Reporting Systems enabled for MAAP(+) Point Reporting
- Monitors and transmits zone alarms (fire and supervisory), troubles and restorations, and Addressable Control Panel status for up to 64 zones or 48 zones with all points reporting active
- Provides up to eight Analog Driver Cards (ADCs) (one standard, seven optional) that may be configured as Class B, Class A, or Class X Signaling Line Circuits (SLCs)
  - Each ADC has a capacity for up to 99 analog addressable smoke or heat sensor and 99 addressable monitor or control modules for a total system count of up to 792 analog addressable smoke or heat sensor and 792 addressable monitor or control modules
  - **IMPORTANT** Large systems with many optional modules such as sounder boxes and fault indication drive more current than smoke and heat detection and monitor and control modules. If using these items, refer to the MAAP(+) I-O-M (P64 001-355-01) for capacity calculations. SLC wiring shall be unshielded twisted pair (UTP).

- Provides two Class A or four Class B Notification Appliance Circuits (NACs)
- Provides two Class A or four Class B Initiating Device Circuits (IDCs). Expandable through installation of an Expansion Backplane and expansion cards
- Quick scanning algorithm for fast reporting
- Plain English display (LCD)
  - Enable / disable sensor (point) event is sent to Central
  - Enhanced walktest and system checkouts through D-31
  - Radio Key-up test
  - Local History output to LCD, printer or laptop
- LEDs indicate the operational status of the Addressable Control Panel
- Internal clock and calendar synchronized with the D-31
- 48 character display for device identification and description
- Provides 24 Vdc filtered power
- New MAAP(+) Planner creates a master configuration file for programming the Panel. The D-31 Central System Admin Client imports the master configuration file, eliminating the need to manually enter the MAAP(+) panel configuration, zone, and point information.
