

# How Genes Work

Each **chromosome** contains thousands of genes. A **gene** is a section of a DNA strand that is made up of a series of bases which contains the information for cells to make one specific protein. **Proteins** in cells act as messengers and help to determine the traits of an organism such as the different shapes, sizes, colors and other features found in living organisms.

## DNA Structure

Chromosomes are made up of **DNA**. **DNA**, or **deoxyribonucleic acid**, is the hereditary material in humans and almost all other organisms. The hereditary information in DNA is stored as a code made up of four chemical bases: **adenine (A)**, **guanine (G)**, **cytosine (C)** and **thymine (T)**. The order, or sequence, of these bases, determines the information available for building and maintaining an organism, similar to the way in which letters of the alphabet appear in a certain order to form words and sentences. DNA bases pair up with each other, A with T and C with G, to form units called **base pairs**.

## Copying DNA

The amount of **DNA** doubles during the beginning of **mitosis**. The double stranded DNA unravels and each strand becomes a **template** on which a new strand is formed.

Complementary bases pair up with the exposed bases on the template strand.

Psychobiology of Gene Expression Ernest Lawrence Rossi, 2002-09-24 The new understanding of the relationships between gene expression and human experience emerging from the Human Genome Project is setting the stage for a profound expansion of our understanding of life. The new neuroscience discoveries about enriching life experiences, neurogenesis and gene expression are poised to profoundly expand our understanding of psychotherapy and the holistic healing arts. We are just beginning to learn how the brain, the body, and our genes interact in ordinary everyday life to create our lives. Here, acclaimed author and pioneer of new approaches to mind-body communication, Ernest Rossi introduces the new science of psychosocial genomics and explores how it will profoundly change our understanding of the pathways of communication among mind, body, and spirit. Integrating modern molecular medicine with traditional holistic healing art and spiritual rites, Rossi documents dramatically new approaches to optimize creativity in psychotherapy and therapeutic hypnosis with both individuals and groups. Part I reviews significant leading edge neuroscience research on the psychobiology of gene expression and neurogenesis that leads to a new vision of the role of consciousness and creativity in the humanities and the healing arts. Part II explores how to creatively facilitate the psychodynamics of gene expression, neurogenesis, and healing in therapeutic hypnosis, psychotherapy, and human relationships in general. The Psychobiology of

Gene Expression illustrates step by step how to facilitate the natural four stage creative process on all levels from mind to molecule in our daily work of building a better brain The book demonstrates how we can use our consciousness and our perception of free will to co create ourselves in cooperation with nature Rossi proposes practical approaches to optimize the natural cycles of gene expression in normal consciousness sleep dreaming meditation and the arts of daily living that are experienced by everyone A case study spanning two chapters containing dialog and explanatory commentary brings the author s work to life and gives readers a deeper appreciation of its clinical application Rossi s lucid writing style and vivid illustrations inspire this text with a new vision of the creative arts humanities and culture in facilitating the optimal development of health performance and consciousness     *The U.S. Quarterly Book Review* ,1952     *Teen Health Course 3* Wright Group-McGraw Hill,2002-04     **The United States Quarterly Book Review** ,1952     **American Monthly Review of Reviews** Albert Shaw,1916     Future Survey Annual 1983 Michael Marien,1984-01-01     *A Subject Bibliography from Highway Safety Literature* United States.
