in Systems Engineering Mourad Debbabi,Fawzi Hassaïne,Yosr Jarraya,Andrei Soeanu,Luay Alawneh,2010-11-16 At the dawn of the 21st century and the information age communication and computing power are becoming ever increasingly available virtually pervading almost every aspect of modern socio economical interactions Consequently the potential for realizing a significantly greater number of technology mediated activities has emerged Indeed many of our modern activities are heavily dependant upon various underlying systems and software intensive platforms Such technologies are commonly used in everyday activities such as commuting traffic control and management mobile computing navigation mobile communication Thus the correct function of the forenamed computing systems becomes a major concern This is all the more important since in spite of the numerous updates patches and firmware revisions being constantly issued newly discovered logical bugs in a wide range of modern software platforms e.g operating systems and software intensive systems e.g embedded systems are just as frequently being reported In addition many of today's products and services are presently being deployed in a highly competitive environment wherein a product or service is succeeding in most of the cases thanks to

its quality to price ratio for a given set of features Accordingly a number of critical aspects have to be considered such as the ability to pack as many features as needed in a given product or service while currently maintaining high quality reasonable price and short time to market

Metal Foams Nihad Dukhan, 2013 This book offers the first full scale technical treatment of an important class of engineered porous materials metal foams Written by a team of metal foam experts from around the world the volume offers new as well as fundamental information on all aspects of metal foams including their theory manufacture structure property relationships and applications The book explains microscopy and modeling tools that enhance the prediction and determination of metal foam properties related to fluid flow heat transfer sound absorption and failure analysis Attention is given to the many techniques for manufacturing and testing metal foams and to how their microstructure can be controlled to create custom properties for applications in acoustics bone implants heat sinks lightweighting and crash protection The text is sufficiently detailed to offer guidance to design and development engineers and yet is basic enough to be used as a textbook or reference by students of materials science mechanical structural or chemical engineering requiring an introduction to the subject
