

5 Points of Darwin's Natural Selection

Read the following situations below and identify the 5 points of Darwin's natural selection.

- 1) There are 2 types of worms: worms that eat at night (nocturnal) and worms that eat during the day (diurnal). The birds eat during the day and seem to be eating **ONLY** the diurnal worms. The nocturnal worms are in their burrows during this time. Each spring when the worms reproduce, they have about 500 babies but only 100 of these 500 ever become old enough to reproduce.

- a. What worm has natural selection selected AGAINST? diurnal worms FOR? nocturnal worms
- b. Darwin's 5 points: Identify the 5 points in the scenario above.
- Population has variations. There are 2 types of worms in the area (diurnal and nocturnal)
- Some variations are favorable. Birds do not eat nocturnal worms (nocturnal worms advantage)
- More offspring are produced than survive. 100 of the original 500 worms survive to reproduce
- Those that survive have favorable traits. More nocturnal worms survive and reproduce
- A population will change over time. Nocturnal worm population increases; diurnal worm population decreases

- 2) There are 3 types of polar bears: ones with thick coats, ones with thin coats and ones with medium coats. It is fall, soon to be winter. The temperatures are dropping rapidly and the bears must be kept warm, or they will freeze to death. Many of the bears have had 2 cubs each but due to the extreme temperatures, many mothers only have one cub left.

- a. What bear will natural selection select AGAINST? thin coats FOR? thick coats
- b. Darwin's 5 points: Identify the 5 points in the scenario above.
- Population has variations. There are 3 types of bears (thick, medium, and thin)

Life Science (Teacher Guide) Dr. Carl Werner, 2018-05-17 Chapter Discussion Question Teachers are encouraged to participate with the student as they complete the discussion questions The purpose of the Chapter Purpose section is to introduce the chapter to the student The Discussion Questions are meant to be thought provoking The student may not know the answers but should answer with their thoughts ideas and knowledge of the subject using sound reasoning and logic They should study the answers and compare them with their own thoughts We recommend the teacher discuss the questions the student's answers and the correct answers with the student This section should not be used for grading purposes DVD Each DVD is watched in its entirety to familiarize the student with each book in the course They will watch it again as a summary as they complete each book Students may also use the DVD for review as needed as they complete each chapter of the course Chapter Worksheets The worksheets are foundational to helping the student learn the material and come to a deeper understanding of the concepts presented Often the student will compare what we should find in the fossil record and in living creatures if evolution were true with what we actually find This comparison clearly shows evolution is an empty theory simply based on the evidence God's Word can be trusted and displayed both in the fossil record and in living creatures Tests and Exams There is a test for each chapter sectional exams and a comprehensive final exam for each book

Robustness and Evolvability in Living Systems Andreas Wagner, 2013-10-24 All living things are remarkably complex yet their DNA is unstable undergoing countless random mutations over generations Despite this instability most animals do not grow two heads or die plants continue to thrive and bacteria continue to divide Robustness and Evolvability in Living Systems tackles this perplexing paradox The book explores why genetic changes do not cause organisms to fail catastrophically and how evolution shapes organisms robustness Andreas Wagner looks at this problem from the ground up starting with the alphabet of DNA the genetic code RNA and protein molecules moving on to genetic networks and embryonic development and working his way up to whole organisms He then develops an evolutionary explanation for robustness Wagner shows how evolution by natural selection preferentially finds and favors robust solutions to the problems organisms face in surviving and reproducing Such robustness he argues also enhances the potential for future evolutionary innovation Wagner also argues that robustness has less to do with organisms having plenty of spare parts the redundancy theory that has been popular and more to do with the reality that mutations can change organisms in ways that do not substantively affect their fitness Unparalleled in its field this book offers the most detailed analysis available of all facets of robustness within organisms It will appeal not only to biologists but also to engineers interested in the design of robust systems and to social scientists concerned with robustness in human communities and populations

George Karleskint,1991 *An Outline of Informational Genetics* Gerard Battail,2008-10-08 Heredity performs literal communication of immensely long genomes through immensely long time intervals Genomes nevertheless incur sporadic errors referred to as mutations which have significant and often dramatic effects after a time interval as short as a human life How can faithfulness at a very large timescale and unfaithfulness at a very short one be conciliated The engineering problem of literal communication has been completely solved during the second half of the XX th century Originating in 1948 from Claude Shannon s seminal work information theory provided means to measure information quantities and proved that communication is possible through an unreliable channel by means left unspecified up to a sharp limit referred to as its capacity beyond which communication becomes impossible The quest for engineering means of reliable communication named error correcting codes did not succeed in closely approaching capacity until 1993 when Claude Berrou and Alain Glavieux invented turbocodes By now the electronic devices which invaded our daily lives e g CD DVD mobile phone digital television could not work without highly efficient error correcting codes Reliable communication through unreliable channels up to the limit of what is theoretically possible has become a practical reality an outstanding achievement however little publicized As an engineering problem that nature solved aeons ago heredity is relevant to information theory The capacity of DNA is easily shown to vanish exponentially fast which entails that error correcting codes must be used to regenerate genomes so as to faithfully transmit the hereditary message Moreover assuming that such codes exist explains basic and conspicuous features of the living world e g the existence of discrete species and their hierarchical taxonomy the necessity of successive generations and even the trend of evolution towards increasingly complex beings Providing geneticists with an introduction to information theory and error correcting codes as necessary tools of hereditary communication is the primary goal of this book Some biological consequences of their use are also discussed and guesses about hypothesized genomic codes are presented Another goal is prompting communication engineers to get interested in genetics and biology thereby broadening their horizon far beyond the technological field and learning from the most outstanding engineer Nature
