

Parallel Lines Cut by a Transversal

If a set of two parallel lines, line l and line m , are crossed or cut by another line, line n , then line n is called the **transversal**.

At each intersection of the transversal and parallel lines there are four angles – angles 1, 2, 3, 4 and angles 5, 6, 7, 8. Many of these eight angles are equal. For example, angles 2, 4, 6, and 8 have the same measurement. Here is why...

The group of angles at each intersection is made up of two pairs of **vertical angles**, or opposite angles that share the same vertex (corner point). Each pair of vertical angles is **congruent**, or equal.

$\angle 1 \cong \angle 3$, angle 1 is congruent to angle 3.

$\angle 2 \cong \angle 4$, angle 2 is congruent to angle 4.

$\angle 5 \cong \angle 7$, angle 5 is congruent to angle 7.

$\angle 6 \cong \angle 8$, angle 6 is congruent to angle 8.

A transversal line cutting through two parallel lines will create multiple pairs of congruent angles. Here are the names of congruent pairs that can be found:

Corresponding Angles

Alternate Interior Angles

Alternate Exterior Angles
