A. Intents/Objectives/Purpose (from NB Chemistry 111-112 Curriculum document) <u>Pedagogical Objectives:</u> 115-3 Explain how a major scientific milestone revolutionized thinking in the scientific communities. <ul style="list-style-type: none"> In particular, explain how the mole changed chemistry. <u>Scientific Objectives:</u> 321-1 Represent chemical reactions and the conservation of mass, using molecular models and balanced symbolic equations. <ul style="list-style-type: none"> Define the law of conservation of mass. 323-1 Define molar mass and perform mole-mass inter-conversions for pure substances <ul style="list-style-type: none"> Define the Mole in terms of the number of atoms in exactly 12 g of carbon-12 (Avogadro's number of particles). Define molar mass and determine the molar mass of an element and compound. Convert number of particles to mass and moles and perform mole-mass inter-conversions. 		

B. Activities	C. Resources	D. Students are...
Administration/Homework <ul style="list-style-type: none"> Take attendance Hand out Periodic Table of Elements Have one scale set up at each table group awaiting student's arrival. 	-Attendance sheet -Desks formed in groups prior to class -Periodic Table of Elements -5 scales (1 per table)	-Sitting at desks in groups arranged ahead of time
1. Introduction/Set/Advanced Organizers <ul style="list-style-type: none"> Have power point set up on laptop connected to an overhead projector. Start class by drawing the students' attention to the front of the room, where 3 elements/compounds are found. Individually introduce Aluminum foil, Water, and Salt. Initiate interest by asking "What do these have in common?" GROUP DISCUSSION -Allow students to generate discussion in groups using their previous knowledge. Provide a hint to guide student discussion (has to do with amount, yet all have different masses). Discuss results of each small group in whole class discussion. Reveal the similarity (MOLES). Introduce the term MOLE, dispelling rumours about everyday use of the word (humour) and define it. 	-Ball of Aluminum foil (27g) -Beaker of water (18g) -Bag of table salt (58.5g) -Overhead projector and screen -Laptop -PowerPoint presentation	-Listening -Observing the materials at front -Discussing in groups -Asking questions for clarification -Laughing at our funny jokes -Reading PowerPoint slides -Taking notes

SCIENCE PROJECTS IN RENEWABLE ENERGY AND ENERGY EFFICIENCY, The Value of Science Projects Science projects are an especially effective way of teaching students about the world around them Whether conducted in the classroom or for a science fair

science projects can help develop critical thinking and problem solving skills In a classroom setting science projects offer a way for teachers to put action into the lessons The students have fun while they re learning important knowledge and skills And the teacher often learns with the students experiencing excitement with each new discovery Science projects are generally of two types non experimental and experimental Non experimental projects usually reflect what the student has read or heard about in an area of science By creating displays or collections of scientific information or demonstrating certain natural phenomena the student goes through a process similar to a library research report or a meta analysis in any other subject Projects of this type may be appropriate for some students at a very early level but they usually do not provide the experiences that develop problem solving skills related to the scientific process On the other hand experimental projects pose a question or hypothesis which is then answered by doing an experiment or by modeling a phenomenon The question doesn t have to be something never before answered by scientist that is not necessary to conduct original research The process of picking a topic designing an experiment and recording and analyzing data is what s important
