

How a TTL flash exposure works

Advanced TTL flash systems, such as Canon's E-TTL II and Nikon's iTTL, use a low power pre-flash before the exposure starts; in some instances you may notice this, but the pre-flash and main flash are usually indistinguishable. Light is reflected by the subject back through the lens and strikes the shutter curtains, where it is measured by the camera's regular metering system rather than by a dedicated flash meter.

How a manual flash exposure works

There is no pre-flash or automatic exposure adjustment by the camera – it's down to you to set an appropriate output. With the flash set to manual, you can adjust its power in fractional steps. A setting of 1/1 means the flash will fire at full power, but you can reduce the power (and the flash exposure) by selecting 1/2, 1/4, 1/8 and so on.

On-Camera Flash, 2015-10-19 Photographers are always looking for perfect light Unfortunately the quality of available light and the situations in which photos are created are rarely perfect This is especially true when photographing weddings or portraits on location So while finding beautiful existing light is every photographer's ideal it isn't always possible This is

the point at which photographers tend to reach for a portable on camera flash. Indeed, these intense light sources can prove invaluable, but only if you know how to use them effectively. In the hands of an inexperienced photographer, on-camera flash will produce images that look flat and lifeless, images with harsh shadows, washed-out skin tones, cavernous black backgrounds, and other unappealing visual characteristics. In this book, acclaimed wedding and portrait photographer Neil van Niekerk shows you how to avoid the pitfalls photographers new to speedlights often encounter so that you can produce professional images using on-camera flash. You'll learn to use simple accessories to manipulate the quality of light from your flash and how to improve a lighting scenario by enhancing rather than overwhelming the existing light. When the available light is too low and too uneven to be combined with flash, he shows you how to override it completely with flash, and with some thought and careful application of specialized techniques, still get results that look great. On-camera flash is one of the most challenging light sources to master, but with the techniques in this book, you'll learn to use it with confidence. For wedding and environmental portrait photographers who must work in ever-changing lighting scenarios, this can mean better images and better sales.

Crime Scene Photography Edward M. Robinson, 2010-02-05. Crime Scene Photography, Second Edition, offers an introduction to the basic concepts of forensic picture taking. The forensic photographer, or more specifically the crime scene photographer, must know how to create an acceptable image that is capable of withstanding challenges in court. The photographic theory and principles have to be well-grounded in the physics of optics; the how-to recommendations have to work, and the end result must be admissible in court. Based on the author's years of experience in the field at both the Arlington County and Baltimore County Police Departments, this book blends the practical functions of crime scene processing with theories of photography to guide the student in acquiring the skills, knowledge, and ability to render reliable evidence. This text has been carefully constructed for ease of use and effectiveness in training and was class-tested by the author at George Washington University. Beginning August 2008, this book will be required reading by the IAI Crime Scene Certification Board for all levels of certification through August 2011. Over 600 full-color photographs. Two new chapters on The History of Forensic Photography and Digital Image Processing of Evidentiary Photography. An essential reference for crime scene photography, including topics such as Composition, the Inverse Square Law, Court Cases affecting photography, Digital Image Processing, and Photogrammetry. Required reading by the Crime Scene Certification Board of the International Association for Identification (IAI) for all levels of certification.
