Genetic Programming Maarten Keijzer, Andrea Tettamanzi, Pierre Collet, Jano van Hemert, Marco Tomassini, 2005-03-10 In this volume we present the contributions for the 18th European Conference on Genetic Programming EuroGP 2005 The conference took place from 30 March to 1 April in Lausanne Switzerland EuroGP is a well established conference and the only one exclusively devoted to genetic programming All previous proceedings were published by Springer in the LNCS series From the outset EuroGP has been co located with the EvoWorkshops focusing on applications of evolutionary computation Since 2004 EvoCOP the conference on evolutionary combinatorial optimization has also been co located with EuroGP making this year's combined events one of the largest dedicated to evolutionary computation in Europe Genetic programming GP is evolutionary computation that solves complex problems or tasks by evolving and adapting a population of computer programs using Darwinian evolution and Mendelian genetics as its sources of inspiration Some of the 34 papers included in these proceedings address foundational and theoretical issues and there is also a wide variety of papers dealing with different application areas such as computer science engineering language processing biology and computational design demonstrating that GP is a powerful and practical problem solving paradigm

Threshold Concepts within the Disciplines, 2008-01-01 Threshold Concepts within the Disciplines brings together leading writers from various disciplines and national contexts in an important and readable volume for all those concerned with teaching and learning in higher education The foundational principle of threshold concepts is that there are in each discipline conceptual gateways or portals that must be negotiated to arrive at important new understandings In crossing the portal transformation occurs both in knowledge and subjectivity Such transformation involves troublesome knowledge a key concern for contributors to this book who identify threshold concepts in their own fields and suggest how to deal with them Part One extends and enhances the threshold concept framework containing chapters that articulate its qualities its links to other social theories of learning and other traditions in educational research Part Two encompasses the disciplinary heart of the book with contributions from a diversity of areas including computing engineering biology design modern languages education and economics In the many empirical case studies educators show how they have used the threshold concept framework to inform and evaluate their teaching contexts Other chapters emphasise the equally important being and becoming dimension of learning Part Three suggests pedagogic directions for those at the centre of the education project with contributions focusing on the socialisation of academics and their continuing quest to be effective teachers The book will be of interest to disciplinary teachers educational researchers and educational
