George William Septimus Piesse

Introduction To Perfumery:

Introduction to Perfumery Anthony Curtis, Tony Curtis, David G. Williams, 2001 **Perfumery** Robert R. Calkin, J. Stephan Jellinek, 1994-09-28 A text reference regarding the structure and function of components used in perfume development and the process of developing perfumes Covers gas chromatography mass spectrometry and a host of other analytical techniques the esthetics and techniques of perfume development the manifold and ever changing safety related requirements of countries and customers concerns about the environmental impact of materials and impurities which affect the perfumer s work *Introduction to Artisan Perfumery* Angie Andriot, 2017 *Perfumes* P.M. Muller, D. Lamparsky, 2012-12-06 The idea of publishing this book on Perfumes Art Science and Technology grew out of the observation that on the verge of the 1990s there was really no state of the art compilation of the relevant know how on which the fragrance industry is based It was obvious that such a compilation would be well received not only by perfumers and fragrance chemists but also by those involved in related trade and marketing or in the development and distribution of consumer products by researchers from other fields by students and finally by amateurs of perfumes in general Therefore we set out to find competent authors who were willing to contribute to the endeavour and we did not do this unselfishly on the contrary we selected a wish list of specialists who would provide us with new insight and characterize the trends and research priorities determining the future Thus we were counting on learning much ourselves in the course of the project We were more than pleasantly surprised by the reactions to our first letter and so was Elsevier We certainly had not expected perfumers who are usually much more doers than writers to react in such an enthusiastic way especially the spontaneous affirmative answer from the famous E Roudnitska created a momentum which contributed significantly to the successful completion of this book But of course we should not create the impression that the other authors chapters are less important and we thank all of them heartily for their invaluable effort **Chemistry of Fragrances** David H Pybus, Charles S Sell, 2007-10-31 Modern perfumery is a blend of art science and technology with chemistry being the central science involved The Chemistry of Fragrances aims to educate and entertain and inform the audience of the very latest chemistry techniques and tools applied to fragrance creativity Beginning with the history of perfumes which goes back over fifty thousand years the book goes on to discuss the structure of the Perfume Industry today The focus then turns to an imaginary brief to create a perfume and the response to it including that of the chemist and the creative perfumer Consumer research toxicological concerns and the use of the electronic nose are some of the topics discussed on this journey of discovery Written by respected experts in their fields this unique book gives an insider view of mixing molecules from behind the portals of modern day alchemy It will be enjoyed by chemists and marketeers at all levels **Perfumery** Steve Van Toller, George H. Dodd, 2013-04-17 THE SENSE OF SMELL The nose is normally mistakenly assumed to be the organ of smell reception It is not The primary function of the nose is to regulate the temperature and humidity of inspired air thereby protecting the

delicate linings of the lungs This is achieved by the breathed air passing through narrow passageways formed by three nasal turbinates in each nostril The turbinates are covered by spongy vascular cells which can expand or contract to open or close the nasal pathways The olfactory receptors innervated by the 1st cranial nerve are located at the top of the nose There are about 50 million smell receptors in the human olfactory epithelia the total size of which in humans is about that of a small postage stamp with half being at the top of the left and half at the top of the right nostril The receptive surfaces of olfactory cells are ciliated and extend into a covering layer of mucus There is a constant turnover of olfactory cells Their average active life has been estimated to be about 28 days

Fundamentals of Fragrance Chemistry Charles S. Sell, 2019-08-12
Comprehensively teaches all of the fundamentals of fragrance chemistry Ernest Beaux the perfumer who created Chanel No 5 said One has to rely on chemists to find new aroma chemicals creating new original notes In perfumery the future lies primarily in the hands of chemists This book provides chemists and chemists to be with everything they need to know in order to create welcome new fragrances for the world to enjoy It offers a simplified introduction into organic chemistry including separation techniques and analytical methodologies discusses the structure of perfume creation with respect to the many reactive ingredients in consumer products and shows how to formulate effective and long lasting scents Fundamentals of Fragrance Chemistry starts by covering the structure of matter in order to show how its building blocks are held together It continues with chapters that look at hydrocarbons and heteroatoms A description of the three states of matter and how each can be converted into another is offered next followed by coverage of separation and purification of materials Other chapters examine acid base reactions oxidation and reduction reactions perfume structure the mechanism of olfaction natural and synthetic fragrance ingredients and much more Concentrates on aspects of organic chemistry which are of particular importance to the fragrance industry Offers non chemists a simplified yet complete introduction to organic chemistry from separation techniques and analytical methodologies to the structure of perfume creation Provides innovative perfumers with a framework to formulate stable fragrances from the myriad of active ingredients available Looks at future trends in the industry and addresses concerns about sustainability and quality management Fundamentals of Fragrance Chemistry is an ideal resource for students who are new to the subject as well as for chemists and perfumers already working in this fragrant field of science

Perfumery Paul Jellinek,1959 **Perfumes** Luca Turin,Tania Sanchez,2010-08-06 I've long wished perfumery to be taken seriously as an art and for scent critics to be as fierce as opera critics and for the wearers of certain fragrances to be hissed in public while others are cheered This year has brought Perfumes The Guide by Luca Turin and Tania Sanchez which I breathed in rather than read in one delighted gulp Hilary Mantel Guardian Perfumes The Guide is the culmination of Turin's lifelong obsession and rare scientific flair and Sanchez's stylish and devoted blogging about every scent that she's ever loved and loathed Together they make a fine and utterly persuasive argument for the unrecognised craft of perfume making Perfume writing has certainly never been this honest compelling or downright entertaining **Piesse's Art of Perfumery**

George William Septimus Piesse,1891 *Essence and Alchemy* Mandy Aftel,2002-05 For centuries people have taken what seems to be an instinctive pleasure in rubbing scents into their skin and using them to pray to heal and to make love Yet in many ways perfumery is a lost art its creative and sensual possibilities eclipsed by the dominance of synthetic ingredients In *Essence and Alchemy* winner of the Sense of Smell Institute's Richard B Solomon Award Mandy Aftel unearths a forgotten world in which scent was celebrated by poets contemplated by philosophers and universally appreciated for its profound resonance with body mind and soul And she seduces the adventurous into experiencing firsthand the pleasures of working with natural essences **Perfumery and Essential Oil Record**,1910 *Perfumes and Perfumery* Raymond A

Young,2021-05-04 This treatise provides a broad overview of the many important aspects involved in the creation of perfumes and a fundamental understanding of the chemical basis of perfumery The emphasis is on the development of fine fragrances for both students and those seeking a more in depth knowledge of perfumery This book is divided into five chapters Essential Oils and Odorants Perfumes History and Modern Perfumery Creation of a Perfume Chemistry of Odorants and the Physiology and Theories of Smell The first chapter covers the characteristics and isolation of some important essential oils from plant blossoms leaves roots rhizomes fruits seeds wood bark and plant exudates resins Also included in this chapter is a description of the characteristics of odorants from animal sources Additional information about the chemical composition of many essential oils is covered in a later chapter on Chemistry of Odorants The basic structure and

composition of perfumes is given in a separate chapter and more detailed descriptions are given for some of the historically important perfumes. Methods of training for perfumery are reviewed and several approaches for composing new fragrances are described in the chapter on Creation of Perfumes. The increasing use of computer technology and artificial intelligence in perfumery is also described. The chapter on the Chemistry of Odorants clarifies the structural character of the many aroma components utilized in perfumes. It is important to note that many of the chemical constituents derived from plants can be produced synthetically in the laboratory and many of the ingredients in perfumes on the market today are synthetic rather than plant derived. The final chapter covers the Physiology of Smell and the complicated Theory of Smell. The molecular structure and vibrational theories of smell are described and conclusions are reached about the most probable mechanism of smell.
