Fuzzy Multi-criteria Decision-Making Using Neutrosophic Sets Cengiz Kahraman,Irem Otaç,2018-11-03 This book offers a comprehensive guide to the use of neutrosophic sets in multiple criteria decision making problems It shows how neutrosophic sets which have been developed as an extension of fuzzy and paraconsistent logic can help in dealing with certain types of uncertainty that classical methods could not cope with The chapters written by well known researchers report on cutting edge methodologies they have been developing and testing on a variety of engineering problems The book is unique in its kind as it reports for the first time and in a comprehensive manner on the joint use of neutrosophic sets together with existing decision making methods to solve multi criteria decision making problems as well as other engineering problems that are complex hard to model and or include incomplete and vague data By providing new ideas suggestions and directions for the solution of complex problems in engineering and decision making it represents an excellent guide for researchers lecturers and postgraduate students pursuing research on neutrosophic decision making and more in general in the area of industrial and management engineering

*Nature-Inspired Algorithms for Optimisation* Raymond Chiong,2009-05-02 Nature Inspired Algorithms have been gaining much popularity in recent years due to the fact that many real world optimisation problems have become increasingly large complex and dynamic The size and complexity of the problems nowadays require the development of methods and solutions whose efficiency is measured by their ability to find acceptable results within a reasonable amount of time rather than an ability to guarantee the optimal solution This volume Nature Inspired Algorithms for Optimisation is a collection of the latest state of the art algorithms and important studies for tackling various kinds of optimisation problems It comprises 18 chapters including two introductory chapters which address the fundamental issues that have made optimisation problems difficult to solve and explain the rationale for seeking inspiration from nature The contributions stand out through their novelty and clarity of the algorithmic descriptions

and analyses and lead the way to interesting and varied new applications Urban Travel Patterns for Hospitals, Universities, Office Buildings, and Capitols Louis E. Keefer, David K. Witheford, 1969 Travel patterns were studied for hospitals colleges and universities office buildings and state capitol complexes The analyses include trip generation trip distribution and general trip characteristics such as trip purpose and mode of travel Data were obtained from many origin and destination studies conducted during recent years for urban transportation planning processes Trips to and from specific types of land use were studied The trip generation characteristics are related to various quantifiable factors for each specific land use through the use of multiple regression analyses **The Economics of Knowledge, Innovation and Systemic Technology Policy** Francesco Crespi, Francesco Quatraro, 2015-05-15 There is wide consensus on the importance of knowledge for economic growth and local development patterns This book proposes a view of knowledge as a collective systemic and evolutionary process that enables agents and social systems to overcome the challenges of the limits to growth It brings together new conceptual and empirical contributions analysing the relationship between demand and supply factors and the rate and direction of technological change It also examines the different elements that compose innovation systems The Economics of Knowledge Innovation and Systemic Technology Policy provides the background for the development of an integrated framework for the analysis of systemic policy instruments and their mutual interaction the socio political and economic conditions of the surrounding environment These aspects have long been neglected in innovation policy as policymakers academics and the business community have mostly emphasized the benefits of supply side strategies However a better understanding of innovation policies grafted on a complexity based approach calls for the appreciation of the mutual interactions between both supply and demand aspects and it is likely to improve the actual design of policy measures This book will help readers to understand the foundations and working of demand driven innovation policies by stressing the importance of competent and smart demand *Dynamic Functioning of Resting State Networks in Physiological and Pathological Conditions, volume II* Roberto Esposito, Filippo Cieri, Nicoletta Cera, Fernando Barbosa, 2023-02-27

**Computer Networks** Marshall D. Abrams, Ira W. Cotton, 1984 **Magnetic Resonance Imaging of Healthy and Diseased Brain Networks** Yong He, Alan Evans, 2015-03-05 An important aspect of neuroscience is to characterize the underlying connectivity patterns of the human brain i.e. human connectomics Over the past few years researchers have demonstrated that by combining a variety of different neuroimaging technologies e.g. structural MRI diffusion MRI and functional MRI with sophisticated analytic strategies such as graph theory it is possible to noninvasively map the patterns of structural and functional connectivity of human whole brain networks With these novel approaches many studies have shown that human brain networks have nonrandom properties such as modularity small worldness and highly connected hubs Importantly these quantifiable network properties change with age learning and disease Moreover there is growing evidence for behavioral and genetic correlates Network analysis of neuroimaging data is opening up a new avenue of research into the

understanding of the organizational principles of the brain that will be of interest for all basic scientists and clinical researchers. Such approaches are powerful but there are a number of challenging issues when extracting reliable brain networks from various imaging modalities and analyzing the topological properties e.g. definitions of network nodes and edges and reproducibility of network analysis. We assembled contributions related to the state of the art methodologies of brain connectivity and the applications involving development, aging and neuropsychiatric disorders such as Alzheimer's disease, schizophrenia, attention deficit hyperactivity disorder and mood and anxiety disorders. It is anticipated that the articles in this Research Topic will provide a greater range and depth of provision for the field of imaging connectomics.
