**TAKE A PRACTICE TEST BEFORE YOU NEED TO
TAKE THE REAL ONE...**

Online Practice Exams

Operating Engineers Local 3 Joint Apprenticeship Committee requires assessment testing of all apprenticeship candidates. You must pass minimum standards deemed by the Department of Labor as necessary for success in a given occupation. Once you have applied for entrance into an Operating Engineers Apprenticeship program, you will be notified for assessment testing. These tests are administered on a computer, and if you fail you will be given another opportunity to test. However, if you pass you will not be given another opportunity to increase your score. Candidates with the highest scores are admitted into the program first. So if you're serious about a career with the Operating Engineers, make your testing opportunity count! Study and Practice!

Hendershot,Marjorie C. Horn,William D. Mosher,1988 The 1982 statistics on the use of family planning and

infertility services presented in this report are preliminary results from Cycle III of the National Survey of Family Growth NSFG conducted by the National Center for Health Statistics Data were collected through personal interviews with a multistage area probability sample of 7969 women aged 15-44. A detailed series of questions was asked to obtain relatively complete estimates of the extent and type of family planning services received. Statistics on family planning services are limited to women who were able to conceive 3 years before the interview date. Overall, 79% of currently married nonsterile women reported using some type of family planning service during the previous 3 years. There were no statistically significant differences between white (79%), black (75%), or Hispanic (77%) wives or between the 2 income groups. The 1982 survey questions were more comprehensive than those of earlier cycles of the survey. The annual rate of visits for family planning services in 1982 was 10.77 visits/1000 women. Teenagers had the highest annual visit rate (15.81/1000) of any age group for all sources of family planning services combined. Visit rates declined sharply with age from 14.47 at ages 15-24 to 4.79 at ages 35-44. Similar declines with age also were found in the visit rates for white and black women separately. Nevertheless, the annual visit rate for black women (13.34/1000) was significantly higher than that for white women (10.33). The highest overall visit rate was for black women 15-19 years of age (18.67/1000). Nearly 2/3 of all family planning visits were to private medical sources. Teenagers of all races had higher family planning service visit rates to clinics than to private medical sources, as did black women age 15-24. White women age 20 and older had higher visit rates to private medical services than to clinics. Never married women had higher visit rates to clinics than currently or formerly married women. Data were also collected in 1982 on use of medical services for infertility by women who had difficulty in conceiving or carrying a pregnancy to term. About 1 million ever married women had 1 or more infertility visits in the 12 months before the interview. During the 3 years before interview, about 1.9 million women had infertility visits. For all ever married women as well as for white and black women separately, infertility services were more likely to be secured from private medical sources than from clinics. The survey design, reliability of the estimates, and the terms used are explained in the technical notes.
