The Moon in the Nautilus Shell Daniel B. Botkin, 2012-09-14 Why do we keep talking about so many environmental problems and rarely solve any If these are scientific issues then why can t scientists solve them or at

least agree on what to do In his new book *The Moon in the Nautilus Shell* ecologist Daniel Botkin explains why For one thing although we live in a world of constantly changing environments and talk a lot about climate change most of our environmental laws policies and scientific premises are based on the idea that the environment is constant never changing except when people affect it For another we have lost contact with nature in personal ways Disconnected from our surroundings we lack the deep understanding and feelings about the environment to make meaningful judgments The environment has become just another one of those special interests that interferes with our lives Poised to be a core text of the twenty first century environmental movement *The Moon in the Nautilus Shell* challenges us to think critically about our role in nature

An Introduction to Scientific Research Methods in Geography and Environmental Studies Daniel Montello, Paul Sutton, 2012-12-10 Covers a broad range of subjects that undergraduates in the discipline should be familiar and comfortable with upon graduation From chapters on the scientific method and fundamental research concepts to experimental design sampling and statistical analysis the text offers an excellent introduction to the key concepts of geographical research The content is applicable for students at the beginning of their studies right through to planning and conducting dissertations The book has also been of particular support in designing my level 1 and 2 tutorials which cover similar ground to several of the chapters Joseph Mallalieu School of Geography Leeds University Montello and Sutton is one of the best texts I've used in seminars on research methodology The text offers a clear balance of quantitative vs qualitative and physical vs human which I've found particularly valuable The chapters on research ethics scientific communication information technologies and data visualization are excellent Kenneth E Foote Department of Geography University of Colorado at Boulder This is a broad and integrative introduction to the conduct and interpretation of scientific research covering both geography and environmental studies Written for undergraduate and postgraduate students it Explains both the conceptual and the technical aspects of research as well as all phases of the research process Combines approaches in physical geography and environmental science human geography and human environment relations and geographic and environmental information techniques such as GIS cartography and remote sensing Combines natural and social scientific approaches common to subjects in geography and environmental studies Includes case studies of actual research projects to demonstrate the breadth of approaches taken It will be core reading for students studying scientific research methods in geography environmental studies and related disciplines such as planning and earth science
