Borden, Enrique García De La Riva, 2023-03-20 **Exploring Plant Rhizosphere, Phyllosphere and Endosphere Microbial Communities to Improve the Management of Polluted Sites** Michel Chalot, Markus Puschenreiter, 2022-01-11 Recent Advances of Epigenetics in Crop Biotechnology Clelia De-la-Peña, Raúl Alvarez-Venegas, Christopher Cullis, 2016-05-31 Epigenetics is a new field that explains gene expression at the chromatin structure and organization level Three principal epigenetic mechanisms are known and hundreds of combinations among them can develop different phenotypic characteristics DNA methylation histone modifications and small RNAs have been identified and their functions are being studied in order to understand the mechanisms of interaction and regulation among the different biological processes in plants Although fundamental epigenetic mechanisms in crop plants are beginning to be elucidated the comprehension of the different epigenetic mechanisms by which plant gene regulation and phenotype are modified is a major topic to develop in the near future in order to increase crop productivity Thus the importance of epigenetics in improving crop productivity is undoubtedly growing Current research on epigenetics suggest that DNA methylation histone modifications and small RNAs are involved in almost every aspect of plant life including agronomically important traits such as flowering time fruit development responses to environmental factors defense response and plant growth The aim of this Research Topic is to explore the recent advances concerning the role of epigenetics in crop biotechnology as well as to enhance and promote interactions among high quality researchers from different disciplines such as genetics cell biology pathology microbiology and evolutionary biology in order to join forces and decipher the epigenetic mechanisms in crop productivity *Abiotic Stress Alleviation in Plants: Morpho-Physiological and Molecular Aspects* Diaa Abd El Moneim, Mehdi Rahimi, Mahmoud Magdy, Mohammad Golam Mostofa, 2023-10-27 Plants are constantly exposed to

changing environmental conditions Abiotic stresses cause adverse effects on plant growth development survival and yield It is essential to improve plant responses to such environmental conditions to achieve sustainable crop growth development and productivity The activation of plant stress signaling mechanisms is crucial to address the adverse impacts of environmental factors on plant growth and productivity Phytoprotectants including signaling molecules play crucial roles in the activation of plant physiological and molecular mechanisms to withstand the negative effects of abiotic stress on plants Investigation of physiological biochemical and metabolic pathways associated with plant adaptation to abiotic stress will help identify the key players involved in plant abiotic stress tolerance mechanisms The sensing signaling and gene regulatory mechanisms that help plants cope with abiotic stress must be fully explored Applicative and Ecological Aspects of Mycorrhizal Symbioses Mustafa Morsy, Sunil Mundra, 2024-11-22 Mycorrhizal symbioses a mutual association between plants and fungi plays a vital role in shaping and balancing the ecosystem of our planet Approximately 80% of vascular plant species form mycorrhizal associations between their roots and soil borne fungi Moreover such association between plants and mycorrhizal fungi drastically affect the water and nutrient absorption by plant roots as well as provides protection against soil borne pathogens Hence mycorrhizal symbioses might be advantageous for plants and our ecosystem under the drastically changing climate which is threatening and distorting our ecosystem Threats to our ecosystem should therefore encourage investigations and inventories of mycorrhizal diversity function and their application Although numerous research has been done in this area some issues remain unsolved because of the dramatic diversity of mycorrhizal associations along with their specificity in response to host plants especially under different climate and soil conditions in different ecosystems Therefore the collection under this research topic aim to provide up to date applicative thorough studies on mycorrhizal symbioses through ecological perspective For this Research Topic we welcome both reviews and original articles that address the following research agenda but not limited to the diversity structure and function of mycorrhizal fungi associated with plants trees crops in different ecosystems the impacts of mycorrhizae on plant species under different environmental condition i e warmer climate drought the interaction between mycorrhizal fungi and plant species in soil with different water level nutrients and salinity the application of the mycorrhizae on regeneration and dynamics of ecosystems as well as their biomass production
