Aelbrecht, 2022-08-26 This book challenges current views that public life is in decline and that contemporary urban design trends reliant on privatisation control events and thematic designs are to be blamed Drawing on detailed and extensive analysis of a case study that illustrates well such urban design trends it shows that informal social life and interaction occur more than its necessary in new master planned environments and new designed public settings whether public or private owned and or managed Furthermore it reveals the existence of a new category of informal public social settings which it calls fourth places because of their close relationship to Oldenburg's third places in terms of social and behavioural characteristics radical departure from the routines of home and work inclusivity and social comfort but distinct in terms of activities locations and spatial conditions being characterised by spatial temporal and managerial in betweenness i.e. indeterminacy in form function and times and a great sense of publicness The acceptance of these findings problematises well established urban design theories about master planning expands existing social theories about the optimal conditions for public social life by empirically and spatially elaborating on them and redefines several spatial concepts for designing public space in relation to the specific dynamics of informal social interaction More importantly it brings optimism to urban design practice offering new insights into designing more lively and inclusive public spaces      Ultrasonic Measurements for Process Control

Lawrence C. Lynnworth, 2013-07-19 Engineers scientists and technologists will find here for the first time a clear and comprehensive account of applications of ultrasonics in the field of process control Using numerous examples of high volume low cost applications the author illustrates how the use of new transducer materials and designs combined with microprocessor based electronics make technical and financial sense for concepts that only a few years ago might have been of interest only to academicians Some of the important topics covered include coupling acoustic isolation transducer and sensor design and signal detection in the presence of noise      *Energy Research Abstracts*, 1992
