Interactions1 Grammar Practice Test:

Aptitude-Treatment Interaction in Second Language Learning Robert M. DeKeyser, 2021-04-21 This volume brings together seven empirical studies about aptitude treatment interactions ATI i.e. about how second language learners with different aptitudes match or don't match with different educational treatments and aptitude testing interactions i.e. about how learners with different aptitudes perform better or worse depending on the way their knowledge and skills are tested. The authors are all established researchers or rising stars in the field of second language acquisition SLA who believe that little can be said about the effectiveness of teaching and testing methods or techniques without taking individual differences into account. Many of the studies corroborate in SLA what has become a central finding in the psychological and educational research about ATI: the more a method puts the burden of information processing on the student, the bigger the role of the corresponding aptitudes. The kinds of findings documented in this volume contribute to a scientific basis for the art of language teaching that will become increasingly useful as emerging technologies make adaptation to individuals and groups more feasible. Originally published as special issue of *Journal of Second Language Studies* 22 2019.

Prosody and interactional fluency of Italian learners of German Simona Sbranna, 2025-07-01 This book explores the development of prosodic and interactional competence in second language acquisition drawing on data from peer interactions by Italian learners of German in both German and their native language Italian as well as from German native speakers. Three key aspects of spoken interaction are examined across proficiency levels: prosodic marking of information status, turn taking and backchannels. The analysis of prosodic marking of information status reveals that learners mark givenness using distinct fundamental frequency patterns as in their native language but apply a reduction in prosodic strength typically found postfocally in native German irrespective of its function. This suggests that learners perceive deaccentuation as a salient marker of native German which they adopt during their learning. This book also presents a novel approach to quantifying interactional competence showing that lower proficiency negatively affects the smoothness of interactional flow resulting in reduced speech time and increased overall silence. Finally, it provides new insights into backchannel use in second language and cross linguistic contexts. Results show a complex non-arbitrary mapping between lexical type, turn taking function and intonation in both native languages. In second language speech dyad, specific behaviour was found to have a stronger effect on backchannel frequency and duration than second language proficiency. Furthermore, learners tend to transfer preferred lexical backchannel types from their first language into their second language. Overall, this book offers a multidimensional perspective on second language spoken interaction and lays the groundwork for future applications in language teaching and assessment. The doctoral work on which this book is based was awarded the IPA PhD Thesis Award for the Best PhD Thesis in the broad area of Phonetics, Speech Sciences and Laboratory Phonology in 2024.

Second Language Interaction in Diverse Educational Contexts Kim McDonough, Alison Mackey, 2013 This volume brings together empirical research that explores interaction in a wide range of educational settings. It includes work that takes a cognitive brain based approach to studying interaction as well as studies that take a social contextual perspective. Interaction is defined quite broadly, with many chapters focusing on oral interaction as is typical in the field, while other chapters report work that involves interaction between learners and technology. Several studies describe the linguistic and discourse features of interaction between learners and their interlocutors, but others demonstrate how interaction can serve other purposes such as to inform placement decisions. The chapters in the book collectively illustrate the diversity of contemporary approaches to interaction research, investigating interactions with different interlocutors: learner-learner, learner-teacher in a variety of environments: classrooms, interactive testing environments, conversation groups and through different modalities.
